Learning

Readers gain a solid understanding of Newtonian dynamics and its application to real-world problems with Pytel/Kiusalaas' **ENGINEERING MECHANICS: DYNAMICS, 4E**. This edition clearly introduces critical concepts using learning features that connect real problems and examples with the fundamentals of engineering mechanics. Readers learn how to effectively analyze problems before substituting numbers into formulas. This skill prepares readers to encounter real life problems that do not always fit into standard formulas. The book begins with the analysis of particle dynamics, before considering the motion of rigid-bodies. The book discusses in detail the three fundamental

methods of problem solution: force mass-acceleration, work-energy, and impulse-momentum, including the use of numerical methods. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

In this ground-breaking book science education is explored as a learning continuum across all years of schooling from Foundation to Year 12. The expert authors, members of Monash University's Science Education Research Group, seek to build pedagogical and content expertise by providing both a level of support and challenge for all teachers based on current research and best practice. The text considers key issues including: what the learner brings to the science classroom; what primary and secondary teachers can learn from each other; the constructivist perspective and its value in learning science; context-based science education; the structure of the

Australian curriculum and science education policy; teacher identity; the nature of scientific knowledge; principles of assessment and understanding the role of ICT in science teaching and learning. Featuring case studies and practical examples in each chapter, this book provides pre-service teachers with the understanding and tools to ensure their students are engaged and inspired in science education throughout their school years.

Engineering Mechanics: Dynamics

Geologists warned it was inevitable that an earthquake would collapse the Three Gorges Dam. When it finally did, a wall of water six hundred feet high rushed down the Yangtze River, destroying other dams as it went. Fifteen million Chinese died in the worst natural disaster in human history. This is what

people are told. It is a lie. Kimberly Trayne has no time for the past. She's a free woman now. There are family reunions to avoid, realm championships to win, and an AI-human hybrid in her life. Or not. It's complicated. What she needs most of all is a vacation. Kim's heard about those; they sound nice. When Mike mentions he has family--of a sort--in China, she even has a destination. What she doesn't know is that behind the Great Firewall of China there are secrets. Secrets about who lives there. Secrets about who dies. Secrets of power and control. Secrets people will kill to keep. Stuff happens, they say. Even after flying halfway around the world, it still keeps happening to her.
