Media, Margins and Civic Agency brings together new research on contemporary media, politics and power. It explores ways and means through which media can and do empower or dis-empower citizens at the margins — that is, how they act as vehicles of, or obstacles to, civic agency and social change. Here we put the activities of groups and practitioners traditionally seen at the margins at the centre of our focus. This means examining the power relations at play in mediated environments at the margins, by the margins, and for the margins. Authors consider which voices we hear and how should we hear them; from black bloggers to extremist voices to NGOs and citizen voices; the role and function of 'traditional' media through reflection on media policy, and media coverage for example in the reporting of protest around issues such as tax avoidance and Margaret Thatcher's funeral.

Responding to recent developments and a growing VLSI circuit manufacturing market, Technology Computer Aided Design: Simulation for VLSI MOSFET examines advanced MOSFET processes and devices through TCAD numerical simulations. The book provides a balanced summary of TCAD and MOSFET basic concepts, equations, physics, and new technologies related to TCAD and MOSFET. A firm grasp of these concepts allows for the design of better models, thus streamlining the design process, saving time and money. This book places emphasis on the importance of modeling and simulations of VLSI MOS transistors and TCAD software. Providing background concepts involved in the TCAD simulation of MOSFET devices, it presents concepts in a simplified manner, frequently using comparisons to everyday-life experiences. The book then explains concepts in depth, with required mathematics and program code. This book also details the classical semiconductor physics for understanding the principle of operations for VLSI MOS transistors, illustrates recent developments in the area of MOSFET and other electronic devices, and analyzes the evolution of the role of modeling and simulation of MOSFET. It also provides exposure to the two most commercially popular TCAD simulation tools Silvaco and Sentaurus. • Emphasizes the need for TCAD simulation to be included within VLSI design flow for nano-scale integrated circuits

- Introduces the advantages of TCAD simulations for device and process technology characterization
- Presents the fundamental physics and mathematics incorporated in the TCAD tools
- Includes popular commercial TCAD simulation tools (Silvaco and Sentaurus)
- Provides characterization of performances of VLSI MOSFETs through TCAD tools
- Offers familiarization to compact modeling for VLSI circuit simulation R&D cost and time for electronic product development is drastically reduced by taking advantage of TCAD tools, making it indispensable for modern VLSI device technologies. They provide a means to characterize the MOS transistors and improve the VLSI circuit simulation procedure. The comprehensive information and systematic approach to design, characterization, fabrication, and computation of VLSI MOS transistor through TCAD tools presented in this book provides a thorough foundation for the development of models that simplify the design verification process and make it cost effective.

" Darlison elucidates the zodiac 's significant place in the Gospels, most specifically in the Book of Mark . . . An intriguing leap into faith " (Kirkus Reviews). For millennia the world has been driven by the differences between the great patriarchal religions. Western civilization—or Christendom, as it was once called—received its values and its confidence from a belief in God,

the Father, and Jesus, his only son. But what if this conviction were founded on an error? Who is the man in the factually inconsistent Gospel stories? And who is the man who makes a brief appearance carrying a jar of water? This extraordinary study by a Unitarian minister suggests that Jesus never existed historically; he was simply a representation of an astrological theology—a representation, simply put, of the zodiac sign of Aquarius. In *The Gospel & the Zodiac*, Rev. Bill Darlison demonstrates that all the other signs are present too, in perfect zodiacal order. The Gospel story is not the product of historians or eyewitnesses, but an older, mystical text produced by an ancient, esoteric school as a guide to the Age of Pisces. Every bit as revelatory and controversial as it sounds, *The Gospel & the Zodiac* will shake up the religious status quo, and in doing so, provide both a new look at a religious icon and a deeper understanding of the faith that binds millions together. " Darlison begins by looking at different scholarly approaches to the gospels, then outlines his astrological interpretation logically and lucidly, matching the zodiacal signs to the narrative of Mark. Several problems in modern genome mapping analysis belong to the field of discrete optimisation on a set of all possible orders. In this book, formulations, mathematical models and algorithms for genetic/genomic mapping problem that can be formulated in TSP-like terms are proposed. Since the 1960s, Operational Research techniques have extensively been developed to support organisations in their Manpower Planning challenge -- a fundamental aspect of Human Resource Management in organisations. This book reviews the techniques and alternative approaches that have been introduced in Manpower Planning (e.g., simulation techniques), and in general, the Markov Chain Theory. Furthermore, the authors of this book propose a new class of strategies for giving the optimal inventory replenishments for each retailer. In addition, the authors demonstrate how to increase the usage of iterative methods in all possible fields by accelerating such solvers using Reconfigurable Hardware. An optimisation method for material layout of incompressible rubber components is presented as well. Other chapters in this book use a generic approach to study minimisation problems on a complete metric space, provide a novel design method in the case of an output feedback suboptimal control problem, derive Levy process-based models of jump diffusion-type for banking operations involving securitisation, capital and profitability, and investigate the optimality of the loan securitisation process that has had a prominent role to play in the sub-prime mortgage crisis (SMC).

traditions and innovations of first-generation Americans traverse the meditative starbursts of hills; ford rivers; cross prairies; and seek out 'the alpenglow of tomorrow and tomorrow.' From Costa Rica to Los Angeles and across the continent, Quesada's poems chronicle one family's history: from the courtship of his parents to their separation, from his childhood struggles to awakening desire from his mother's lottery winnings to his own personal losses, Ruben Quesada carries us toward 'that seam in space' where dream and experience intersect.
