Out-of-print for years, this highly sought-after volume, remains the most popular reference on inertial navigation systems analysis. Finally, this classic book is back in print and readily available only from Artech House. Authored by a pioneer in the field, this authoritative resource focuses on terrestrial navigation, but is also useful for air and sea applications. Packed with valuable, time-saving equations and models, the book helps engineers design optimal navigation systems by comparing the performance of the various types of system mechanizations. Although applications and technology have changed over the years, this book remains the best source for fundamental inertial navigation system knowledge, from notational conventions, reference frames, and geometry of the earth, to unified error analysis, self-alignment techniques, and the development of a system error model. This well-illustrated, timeless reference belongs on the shelf of every practicing engineer working in this area.

Renowned German aviation specialist Manfred Griehl has collected a unique and valuable selection of photographs of Luftwaffe projects that never made it into battle. They remained on the drawing board or at prototype stage either because they were deemed unsuitable or the developers simply ran out of time and the projects never went into production. Most photographs come from the development sites and testing grounds of the major manufacturers of Nazi Germany: companies such as Dornier, Junkers, Focke-Wulf and Heinkel all received funding from the government to develop bigger and faster aircraft. A huge amount of private testing went on with major organizations such as Daimler-Benz, BMW and Siemens investing huge amounts in new engine systems and other advances such as radar. This book also details the innumerable alterations that were made to existing service aircraft to equip them for new roles. There are examples of Fw190s developed for the delivery of chemical and toxic weapons, the high altitude Junkers EF 61, the early prototype WNF 342 helicopter as well as numerous examples of developmental jet fighters that could very well have been realized had it not been for the effectiveness of the Allied bombing campaign in restricting the supply of necessary materials.

Lakeland, the historical African American community of College Park, was formed around 1890 on the doorstep of the Maryland Agricultural College, now the University of Maryland, in northern Prince George's County. Located less than 10 miles from Washington, D.C., the community began when the area was largely rural and overwhelmingly populated by European Americans. Lakeland is one of several small, African American communities along the U.S. Route 1 corridor between Washington, D.C., and Laurel, Maryland. With Lakeland's central geographic location and easy access to train and trolley transportation, it became a natural gathering place for African American social and recreational activities, and it thrived until its self-contained uniqueness was undermined by the federal government's urban renewal program and by societal change. The story of Lakeland is the tale of a community that was established and flourished in a segregated society and developed its own institutions and traditions, including the area's only high school for African Americans, built in 1928.

This companion volume to *Care of the Soul* offers more of Thomas Moore's inspiring wisdom and empathy as it expands on his ideas about life, love, and the mysteries of human relationships. In *Care of the Soul*, Thomas Moore explored the importance of nurturing the soul and struck a chord nationwide—the book became a long-standing bestseller, topping charts across the country. Building on that book's wisdom, *Soul Mates* explores how relationships of all kinds enhance our lives and fulfill the needs of our souls. Moore emphasizes the difficulties that inevitably accompany many relationships and focuses on the need to work through these differences in order to experience the deep reward that comes with intimacy and unconfined love.

The Change Process in Psychotherapy During Troubling Times invites readers to consider what it is psychotherapists do that leads to change. The book highlights different theoretical approaches, questions old paradigms, and illustrates the change process when working with people facing a range of life challenges such as the survivors of childhood trauma, refugees, and people dealing with traumatic loss. Moving between consideration of micro-moments when working with individual clients and bigger questions about how to promote change in the face of current world problems, it addresses issues that touch us all. At the same time, the book acknowledges the unprecedented challenges in today's world such as the pace of change, the thousands of displaced people who seek refuge in other countries, the illness and loss caused by the coronavirus pandemic, and the impact of climate change on lifestyles and the environment. The book presents a topical consideration of the relevance of therapeutic assumptions, theories, and practices to current global crises. With the breadth of presenting issues considered and the examples of a variety of creative approaches supporting change, the book will be useful to psychotherapists in practice and in training working in a range of settings with different populations. It will also be of interest to others working in the helping professions.
