[A History of Psychology in Letters](#) Taylor & Francis

Attractively illustrated with over a hundred halftones and drawings, this volume presents a series of vibrant profiles that trace the evolution of our knowledge about the brain. Beginning almost 5000 years ago, with the ancient Egyptian study of "the marrow of the skull," Stanley Finger takes us on a fascinating journey from the classical world of Hippocrates, to the time of Descartes and the era of Broca and Ramon y Cajal, to modern researchers such as Sperry. Here is a truly remarkable cast of characters. We meet Galen, a man of titanic ego and abrasive disposition, whose teachings dominated medicine for a thousand years; Vesalius, a contemporary of Copernicus, who pushed our understanding of human anatomy to new heights; Otto Loewi, pioneer in neurotransmitters, who gave the Nazis his Nobel prize money and fled Austria for England; and Rita Levi-Montalcini, discoverer of nerve growth factor, who in war-torn Italy was forced to do her research in her bedroom. For each individual, Finger examines the philosophy, the tools, the books, and the ideas that brought new insights. Finger also looks at broader topics--how dependent are researchers on the work of others? What makes the time ripe for discovery? And what role does chance or serendipity play? And he includes many fascinating background figures as well, from Leonardo da Vinci and Emanuel Swedenborg to Karl August Weinhold--who claimed to have reanimated a dead cat by filling its skull with silver and zinc--and Mary Shelley, whose Frankenstein was inspired by such experiments. Wide ranging in scope, imbued with an infectious spirit of adventure, here are vivid portraits of giants in the field of neuroscience--remarkable individuals who found new ways to think about the machinery of the mind.

This is the first of four volumes to be published as part of this book series, on the life and work of Richard Ned Lebow. In a career spanning six decades, Richard Ned Lebow has made important contributions to the study of international relations, political and intellectual history, motivational and social psychology, philosophy of science, and classics. He has authored, coauthored or edited 30 books and almost 250 peer-reviewed articles. These four volumes are excerpts from this corpus. The first volume includes an intellectual autobiography, bibliography, and assessments of Lebow's contributions to diverse fields by respected authorities. It shows how a scholar's agenda evolves in response to world events and his efforts to grapple with them theoretically and substantively. It elaborates pathways for addressing these events and their consequences in an interdisciplinary manner, and offers new concepts and methods for doing so. Richard Lebow's research bridges international relations, psychology, history, classics, political theory and philosophy of science. He is author, coauthor, or editor of 34 books and almost 250 peer reviewed articles. Contributors to the book are: Simon Reich – Mervyn Frost - Janice Gross Stein - Stefano Guzzini – Markus Kornprobst - Harald Müller - Christian Wendt - Robert English.

"This volume traces the socialization process, professional development, career paths, and theory and research of contemporary pioneers in education and psychology. This volume contains inter-views of leading scholars who are at the vanguard of teaching and learning. They shared how their childhood development influenced their theoretical paths and research endeavors and reveal their thoughts, beliefs, and experiences that made them who they are today. These scholars responded to questions pertaining to their childhood socialization, initial interest in education and psychology, role models, research interests and major findings, future direction of their research, educational implications derived from their research, and perception of their legacy. They are real people who have had experiences like anybody else, but who found homes and teachers who supported them. While in college, they found educators who mentored them. Readers will find that this volume offers them an opportunity to learn the background of contemporary pioneers in education and psychology, provides helpful sources where they can learn about how major theories developed and where they are moving, and reveals the personal anecdotes that influenced the conceptualization of contemporary theories and research. Educators and students will find that this book provides hope and a rejuvenated enthusiasm about the status of education and psychology and that they too can be leaders in their own ways"--

[The Creation of Scientific Psychology](#) Springer Nature

Edgar Rubin was one of the outstanding pioneers of perceptual psychology in the early twentieth century. His approach involved a turning away from an earlier elementaristic psychology towards an approach based on "perceptual wholes." Rubin's approach is closely linked to the Gestalt revolution in perceptual psychology and was eagerly embraced by the Gestaltists. This has often led to Rubin being classified as a Gestalt psychologist. This misrepresents his position as is shown in the book. Rubin's aim was to develop a descriptive psychology — or aspective psychology to use his terminology — which would do full justice to the complex nature of psychological phenomena. Thus he rejected attempts by the Gestalt psychologists to explain diverse phenomena within a single overarching framework. While Rubin is internationally often misclassified as a Gestalt psychologist, in Denmark he is often hailed as a pioneer of a specific Danish "school of phenomenology." This also misrepresents Rubin's approach who was highly critical of psychological "schools." His criticisms of the overambitious theoretical aspirations of Gestalt psychology, his negative attitude towards school formation in psychology were both highly prescient. What remains today of Gestalt psychology is primarily its descriptive parts; the idea of schools of psychology, so common in early twentieth century psychology is now seen as a totally outmoded viewpoint. There is an interesting moral in this story for the history and status of psychology; to wit, that Rubin's emphasis on the correct description of psychological phenomena shows what is likely to live on as classic contributions to psychology. This certainly holds for his own work on figure and ground which, after almost a century, is still universally known and admired by psychologists. He was indeed a consummate psychological observer. The book argues for the importance of description in psychology.

Since the 17th century, autobiography has an honorable place in the study of history. In 1930, the preeminent historian of psychology, Edwin Boring, writes that a science separated from its history lacks direction and promises a future of uncertain importance. To understand what psychology is and what it is becoming, the autobiographies of famous psychologists is history at its best. Here we find model inquirers of the science who offer a personalized account of themselves and their vocation in the context of the history of the science. What is characteristic of many of those who have contributed to an alternate vision of psychological science is that they never considered themselves, or were considered by others, as belonging to the mainstream of the discipline. In considering an alternative history of psychology in autobiography, the editor invited contributors whose research and writings have pushed the discipline in other directions, pushed its limits, and whose scholarship finds its philosophical framework outside the discipline altogether. If these contributors may not be model inquirers, their scholarship is very much a matter of consequence for those who wish to understand psychology. Among the outliers included here are those who devoted themselves to the writing of psychology, examining its history, theories, research and professional practices, and who enthusiastically embraced, over the course of their lives, the discipline as a human science. Their influence has been subtle as has been their appeal to many students who affection for the discipline finds its promise in a discerning self-awareness and a critical understanding of others and their worlds. This volume is not simply a collection of personal chronologies which might inspire or lend appreciation to a younger generation. Our contributors write from their personal and professional experience, of course, but they write of their thinking and understanding of the psyche as an aspect of human life, of psychology as an academic form of human sciences' inquiry, and so bring to bear their scientific and philosophical imagination to their personal challenges in their chosen vocation as psychologists. Our contributors cover a broad swath of the second half of the 20th century, the century of psychology. Nurturing the discipline from within various philosophical, social-political, and cultural roots, their autobiographies exemplify marginality, if not alienation, from the mainstream, even as their professional and personal lives give expression to engaged scholarship, commitment to vocation and, straightforwardly and reflectively, a love of the heart. From Germany, Carl Graumann, from France, Erika Apfelbaum, from Canada, David Bakan and Kurt Danziger, and from the United States, Amedeo Giorgi, Robert Rieber, and Joseph Rychlak, relate their lives to the larger contexts of our times. Their personal stories are an integral part of the historiography of our discipline. Indeed, a contribution to historiography of our discipline is constituted in their autobiographical self-presentations, for their writings attest as much to their lives as model inquirers as they do to the possibility of psychology as a human science.

A History of Psychology Academic Press

The science and practice of psychology has evolved around the world on different trajectories and timelines, yet with a convergence on the recognition of the need for a human science that can confront the challenges facing the world today. Few would argue that the standard narrative of the history of psychology has emphasized European and American traditions over others, but in today's global culture, there is a greater need in psychology for international understanding. This volume describes the historical development of psychology in countries throughout the world. Contributors provide narratives that examine the political and socioeconomic forces that have shaped their nations' psychologies. Each unique story adds another element to our understanding of the history of psychology. The chapters in this volume remind us that there are unique contexts and circumstances that influence the ways in which the science and practice of psychology are assimilated into our daily lives. Making these contexts and circumstances explicit through historical research and writing provides some promise of greater international insight, as well as a better understanding of the human condition.
