Survive long enough, and strangeness becomes cliché. Virgil Copeland, Randall Panwar, and Gabrielle Villanti are all brilliant young biotechnologists, working together on an artificial life-form affectionately known as ¿ LOVs, ¿ an

acronym for Limit Of Vision, because in size LOVs are just at the boundary of what the human eye can easily see. LOVs contain bioengineered human neurons. They enhance brain function when implanted in test animals. Experimentation on humans is, of course, highly illegal. But it is the nature of brilliant and ambitious young minds to ignore the rules. Believing the LOVs to be perfectly safe, Virgil, Panwar, and Gabrielle experiment on themselves, using implanted LOVs to enhance their own cognitive abilities. But there is a limit of vision, too, when we try to foresee the consequences of technology, especially of a living, thinking technology that can evolve into new forms in a matter of hours. When the experiment goes terribly wrong, the consequences are bizarre and unforeseeable. Virgil finds himself on the run, riding the whirlwind of a runaway biotechnology that could lead to the next phase of human evolution.

“A twisty, cold-case mystery custom made for fans of Sara Shepard, PLL and Veronica Mars! The edge-of-your-seat plot, sinister

backstory and smart, brave and irreverent main character made this whodunit unputdownable.”—Justine Magazine In *To Catch a Killer*, a contemporary mystery by debut author Sheryl Scarborough, a teenage girl uses forensic science to solve the cold-case murder of her mother. Erin Blake has one of those names. A name that is inextricably linked to a grisly crime. As a toddler, Erin survived for three days alongside the corpse of her murdered mother, and the case—which remains unsolved—fascinated a nation. Her father's identity unknown, Erin was taken in by her mother's best friend and has become a relatively normal teen in spite of the looming questions about her past. Fourteen years later, Erin is once again at the center

of a brutal homicide when she finds the body of her biology teacher. When questioned by the police, Erin tells almost the whole truth, but never voices her suspicions that her mother's killer has struck again in order to protect the casework she's secretly doing on her own. Inspired by her uncle, an FBI agent, Erin has ramped up her forensic hobby into a full-blown cold-case investigation. This new murder makes her certain she's close to the truth, but when all the evidence starts to point the authorities straight to Erin, she turns to her longtime crush (and fellow suspect) Journey Michaels to help her crack the case before it's too late. After falling in with Natalie, an ultra-rich heiress trying to escape the clutches of her repressive father, the two decide to give up fully on formal society—and walk away. After all, now that anyone can design and print the basic

Are You Listening? Axon Press

OneZero, Medium's official technology publication, is thrilled to announce a print-on-demand edition of *How to Destroy Surveillance Capitalism* by Cory Doctorow, with an exclusive new chapter. *How to Destroy Surveillance Capitalism* was first published online in August, where it was an instant hit with readers, scholars, and critics alike. For years now, we've been hearing about the ills of surveillance capitalism - the business of extracting, collecting, and selling vast reams of user data that has exploded with the rise of tech giants like Google, Facebook, and Amazon. But what if everything we've been hearing is wrong? What if surveillance capitalism is not some rogue capitalism or a wrong turn taken by some misguided corporations? What if the system is

working exactly as intended - and the only hope of restoring an open web is to take the fight directly to the system itself? In Doctorow's timely and crucial new nonfiction work, the internationally bestselling author of *Walkaway*, *Down and Out in the Magic Kingdom*, and *Little Brother*, argues that if we're to have any hope of destroying surveillance capitalism, we're going to have to destroy the monopolies that currently comprise the commercial web as we know it. Only by breaking apart the tech giants that totally control our online experiences can we hope to return to a more open and free web - one where predatory data-harvesting is not a founding principle. Doctorow shows how, despite popular misconception, Facebook and Google do not possess any "mind-control rays" capable of brainwashing users into, say, voting for a presidential candidate or joining an extremist group - they have simply used their monopoly power to profit mightily off of people interested in doing those things and made it easy for them to find each

other. Doctorow takes us on a whirlwind tour of the last 30 years of digital rights battles and the history of American monopoly - and where the two intersect. Through a deeply compelling and highly readable narrative, he makes the case for breaking up Google, Facebook, Amazon, and Apple as a means of ending surveillance capitalism.
