The Investigating Arthur Conan Doyle and Sherlock Holmes Colloquium and

donation of the third largest private collection of Sherlockiana in the world were supposed to produce a weekend of great publicity for tiny St. Benignus college in Erin, Ohio. But when theft and murder come to campus, college public relations director Jeff Cody finds himself knee-deep in Sherlockian suspects. Besieged by an aggressive reporter he loves but no longer dates, he is also competing with his eccentric brother-in-law, Sebastian McCabe, to solve the crimes first. The mess

worsens when Jeff and his ex-girlfriend, Lynda Teal, themselves fall under suspicion of murder and with good reason, for they have something to hide. This satirical romp takes Sherlock Holmes seriously, but not Holmesians. A witty and engaging spoof sure to delight not only the deerstalker set but mystery fans in general.

Prealgebra 2e is designed to meet scope and sequence requirements

for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Students who are taking basic mathematics and prealgebra classes in college present a unique set of challenges. Many students in these classes have been unsuccessful in their prior math classes. They may think they know some math, but their core knowledge is full of holes. Furthermore, these students need to learn much more than the course content. They need to learn study

skills, time management, and how to deal with math anxiety. Some students lack basic reading and arithmetic skills. The organization of Prealgebra makes it easy to adapt the book to suit a variety of course syllabi.
