BANTAM is the first modeling language specifically designed for applications in Biometrics and Token Technology. It represents a significant step forward for the design and implementation of biometric and related technology applications in that: - it is very simple to learn and use; - it offers a consistent system of documentation and a clarity of presentation which make the accurate description of user requirements much easier; - it provides a complete methodology for managing the project from original business case, through procurement and implementation, to subsequent training and support. "The User Guide" provides much more than just a guide to the Bantam methodology: readers will also find lots of good advice on program management in general and will gain an insight into designing biometric and related applications. It will be essential reading for anyone who is serious about biometrics and related technologies, including governmental/corporate end-users, systems integrators, biometric vendors, application developers and device manufacturers. It will also be useful background reading for advanced students and IT and management consultants. Reviews of Julian Ashbourn's first book: "Biometrics: Advanced Identity Verification": "You could attend a dozen conferences and not come away with the kind of overview presented in this new book". Dave Mintie, Connecticut Department of Social Services " a highly readable, entertaining guidebook that should serve as a welcome companion for anyone who must promote, explain, justify, or control an organization's transition to

biometric technology." Richard Norton, Executive Director, International Biometrics Industry Association

"Congratulations to George Balana for creating a unique tool which leverages the power of Mind Mapping(r) to assist in the retention of project management knowledge areas. Used in conjunction with the PMBOK Guide Fourth Edition(r), Xcelerate your PMP(r), serves as a valuable reference with an easy to follow and creative format." Herman Gonzalez, PMP - President, PMI-SOC Board of Directors "George Balana is a high-energy person, always striving for excellence in everything he does, very often going the extra mile in pursuing results. With a visible ability to think outside-the-box, George enhances the dynamics of any group he participates in." George Jucan, PMP - Director, PMI-SOC Board of Directors, Lead Contributor PMBOK(r) Guide Fourth Edition, Project Manager Competency Development Framework - Second Edition and Government Extension to the PMBOK(r) Guide - Third Edition. "I worked with George on different volunteering initiatives. George is very enthusiastic, fast learner, eager to deliver results and fun to work with. George delivers high quality results, while keeping time constraints in mind." Felix Moshkovich, PMP, CMC, PMI-SOC - Director Professional Development, PMI-SOC Board of Directors "I had first hand experience using this book during my PMP preparation and I passed in my first attempt. The mind maps concept is a powerful and fast track tool in the learning process and they are used on this book in a way that helps you assimilate the PMBOK processes. You will certainly find this book helpful in your PMP preparation." Fortunato Couto, PMP "Getting your Project Management Professional (PMP) designation is an investment in both yourself and your career. George Balana and his teachings allowed me to pass my PMP Exam on my first attempt. His PMBOK MindMapping Guide was useful for prepping for the exam. Long after the exam, it still provides a quick reference guide to rekindle acquired knowledge (@RLavigne42)." - Robert La

The Simulation Networking/Training Requirements Relational Database was developed to

support analyses and training research projects for applying networked simulators to collective training. The collective tasks, subtasks, and standards described in armor platoon-, company team-, and battalion task force- level Mission Training Plan (MTP) documents form the core of the database. This core is supplemented with three types of data on each of over five thousand collective performance standards. The first type of data rates the extent to which the unit can perform the activities associated with each standard in the current simulation networking (SIMNET) environment. The second type of data provides information on how each of 41 potential enhancements to SIMNET would change the extent to which units can perform activities associated with each standard. This type of data ensures the utility of the database as new generations of network simulators are fielded. The third type of data identifies the source or sources of the data required to assess whether a unit meets performance standards in the networked simulator training environment. These data sources include data broadcast over the simulation network, unit plans for performing the mission, terrain data, tactical communications, and direct observation of behavior. SIMNET, Collective training, Networked simulators, Cost-effectiveness analysis, Training strategies.

The Communication Protocol Software was developed at the NASA Lewis Research Center to support the Advanced Communications Technology Satellite High Burst Rate Link Evaluation Terminal (ACTS HBR-LET). The HBR-LET is an experimenters terminal to communicate with the ACTS for various experiments by government, university, and industry agencies. The Communication Protocol Software is one segment of the Control and Performance Monitor (C&PM) Software system of the HBR-LET. The Communication Protocol Software allows users to control and configure the Intermediate Frequency Switch Matrix (IFSM) on board the ACTS to yield a desired path through the spacecraft payload. Besides IFSM control, the C&PM Software System is also responsible for instrument control during HBR-LET experiments, uplink power control of the HBR-LET to demonstrate power augmentation during signal fade events, and data display. The Communication Protocol Software User's Guide, Version 1.0 (NASA CR-189162) outlines the commands and procedures to install and operate the Communication Protocol Software. Configuration files used to control the IFSM, operator commands, and error recovery procedures are discussed. The Communication Protocol Software Maintenance Manual, Version 1.0 (NASA CR-189163, to be published) is a programmer's guide to the Communication Protocol Software. This manual details the current implementation of the software from a

technical perspective. Included is an overview of the Communication Protocol Software, computer algorithms, format representations, and computer hardware configuration. The Communication Protocol Software Test Plan (NASA CR-189164, to be published) provides a step-by-step procedure to verify the operation of the software. Included in the Test Plan is command transmission, telemetry reception, error detection, and error recovery procedures.

Communication Technology Update, Third Edition provides the latest information on as many communication technologies as possible, using as many specific statistics on market share, units sold, etc., as possible to allow comparison among the technologies. This book is designed to help make sense of the spectrum of communication technologies. The text explores the widest possible range of technologies, from broadcast to telephony and from wired to wireless. In discussing each technology, this book will not only deal with the hardware of the technology, but also with the software, organizational structure, political and economic influences, and individual users of the technologies. Major developments in each of these areas are presented for each technology, along with background information to help explain the major factors in the evolution of the technology. The first chapter begins by defining communication technology and introducing the "umbrella perspective" used to present and analyze each technology. Following this discussion, an overview of the remainder of the book is presented. This book targets two groups of users. One of which is the group of communication professionals who have a desire to keep up with the latest developments both within and adjacent to their particular fields. Second is the group of students who are studying communication technology and need information that is more current than that provided by a textbook and more comprehensive than that found in trade magazines.
