Life happens. For author Julie Annette Bennett and her husband, Scott, their love for each other became the basis for an extraordinary journey that would change their lives forever in unimaginable ways. When Scott collapsed in the Target parking lot on March 4, 2007, his wife of fifteen years believed he had died. As Julie called 911, she thought, Oh my God! I'm not ready. Please don't take him yet. Please God, don't let him die! That moment in time began a medical journey for the couple that no one should ever have to live through. Together they

faced uncertainties that would test Scott's strength of spirit and fill Julie with a courage that would guide her as she became a caregiver for the man she loved. Now Julie shares their story in a loving tribute to Scott and to their beautiful life together; she also offers a helpful guide for all caregivers encountering their own challenges. This personal narrative shares the story of two lives that embarked on a sixteen-year journey through chronic illnesses that included Alzheimer's and eventual grief, offering advice for caregivers along the way.

With blue, green, and gold foliage and shapes ranging from spiky to weeping,

conifers have the potential to be garden design stars. But they are commonly misused in gardens and landscapes, leading to looming spruces squashed against a house or rows of kettledrum-shaped yews along a sidewalk. When used correctly and creatively, conifers can be star players in creating beautiful, long-lasting plant combinations or serene backyard havens. Designing with Conifers shows readers exactly how to choose the best conifers for specific needs. Chapters cover shape, color, and conifers for specific sites and conditions, including front gardens, hedges and screens, topiary, dwarf conifers, shade gardens, Asian-style gardens, bonsai, and miniature railroad gardens. Also includes useful appendices that list of conifers for various problems and conditions, like conifers for areas plagued by deer and the best conifers for Christmas trees and Southern gardens. Each section is enlivened with gorgeous color photographs. Whatever landscape situation or challenge a gardener designer faces, Designing with Conifers shows how to make the best choice from this beautiful, useful, and versatile group of plants.

Welcome to Real-Time Bluetooth Networks - Shape the World. This book, now in its second printing December 2017, offers a format geared towards hands-on self-paced learning. The overarching goal is to give you the student an experience with real-time operating systems that is based on the design and development of a simplified RTOS that exercises all the fundamental concepts. To keep the discourse grounded in practice we have refrained from going too deep into any one topic. We believe this will equip the student with the knowledge necessary to explore more advanced topics on their own. In essence, we will teach you the skills of the trade, but mastery is the journey you will have to undertake on your own. An operating system (OS) is layer of software that sits on top of the hardware. It manages the hardware resources so that the applications have the illusion that they own the hardware all to themselves. A real-time system is one

that not only gets the correct answer but gets the correct answer at the correct time. Design and development of an OS therefore requires both, understanding the underlying architecture in terms of the interface (instruction set architecture, ISA) it provides to the software, and organizing the software to exploit this interface and present it to user applications. The decisions made in effectively managing the underlying architecture becomes more crucial in real-time systems as the performance (specifically timing) demands go beyond simple logical correctness. The architecture we will focus on is the ARM ISA, which is a very popular architecture in the embedded device ecosystem where real-time systems proliferate. A quick introduction to the ISA will be followed by specifics of TI's offering of this ISA as the Tiva and MSP432 Launchpad microcontroller. To make the development truly compelling we need a target application that has real-time constraints and multi-threading needs. To that end you will incrementally build a personal fitness device with Bluetooth connectivity. The Bluetooth connectivity will expose you to the evolving domain of Internet-of-things (IoT) where our personal fitness device running a custom RTOS will interact with a smartphone.

—Veronica Roth, #1 New York Times bestselling author of *Carve the Mark* and the *Divergent* series A missing girl on a journey of revenge. A Serial—like podcast following the clues she's left behind. And an ending you won't be able to stop talking about. "Today, WNRK is launching the first episode of our new serialized podcast, *The Girls*, created and hosted by West McCray." When popular radio personality West McCray receives a desperate phone call from a stranger imploring him to find nineteen-year-old runaway Sadie Hunter,

he's not convinced there's a story there; girls go missing all the time. But when it's revealed that Sadie fled home after the brutal murder of her little sister, Mattie, West travels to the small town of Cold Creek, Colorado, to uncover what happened. Sadie has no idea that her journey to avenge her sister will soon become the subject of a blockbuster podcast. Armed with a switchblade, Sadie follows meager clues hoping they'll lead to the man who took Mattie's life, because she's determined to make him pay with his own. But as West traces her path to the darkest, most dangerous corners of big cities and small towns, a deeply unsettling mystery begins to unfold—one that's bigger than them both. Can he find Sadie before it's too late? Alternating between Sadie's unflinching voice as she hunts the killer and the podcast transcripts tracking the clues she's left behind, Sadie is a breathless thriller about the lengths we go to protect the ones we love and the high price we pay when we can't. It will haunt you long after you reach the final page.
