Shadow of the Sentinel

Over the last ten years, journalist and al-Qa'ida expert Abdel Bari Atwan has cultivated uniquely well-placed sources and amassed a wealth of information about al-Qa'ida's origins, masterminds and plans for the future.

Atwan reveals how al-Qa'ida's radical departure from the classic terrorist/guerrilla blueprint has enabled it to outpace less adaptable efforts to neutralize it. The fanaticism of its fighters, and their willingness to kill and be killed, are matched by the leadership's opportunistic recruitment strategies and sophisticated understanding of psychology, media, and new technology - including the use of the internet for training, support, and communications. Atwan shows that far from committing acts of violence randomly and indiscriminately, al-Qa'ida attacks targets according to a decisive design underwritten by unwavering patience. He also argues that events in Iraq and Saudi Arabia are watershed moments in the group's evolution that are making it more dangerous by the day, as it refines and appropriates the concept of jihad and makes the suicide bomber a permanent feature of a global holy war. While Osama bin Laden and Ayman al-Zawahiri remain al-Qa'ida's figureheads, Atwan identifies a new kind of leader made possible by its horizontal chain of command, epitomized by the brutal Abu Mus'ab al-Zarqawi in Iraq and the bombers of London, Madrid, Amman, Bali, and elsewhere. Scholarly, analytical, objective, it is also intensely readable, being by far the best book on the subject.' Tony Benn 'This is a must-read book for anyone interested in understanding our increasingly scary world.' Gavin Esler 'What shines out ... is a profound desire to investigate and reveal the truth. Intelligent and informative.' Jason Burke, Guardian 'Deeply researched, well reported and full of interesting and surprising analyses. It demands to be read.' Peter Bergen, author of Holy War, Inc

This edited volume offers a crosscutting view of STEM and is comprised of work by scholars in science, technology, engineering, and mathematics education. It offers a view of STEM from the disciplines that comprise it, while adhering to the idea that STEM itself is an interdisciplinary treatment of all the associated disciplines in a meaningful way. This book raises and answers questions regarding the meaning of STEM education and research. This volume is divided into three sections: the first one describes the nature of the component disciplines of STEM. The next section presents work from leaders representing all STEM

disciplines and deals with aspects such as K-12 and post-secondary education. The last section draws conclusions regarding the natures of the disciplines, challenges and advantages of STEM education in terms of theoretical and practical implications. The two final chapters compile arguments from the research chapters, describing themes in research results, and making recommendations for best STEM education practice, and examining areas for future research in STEM education.

When Sir William Waad became Lieutenant of the Tower of London in August 1605, only three months before the Gunpowder Plot, it was the culmination of a lifetime of service to the Crown. For the previous 22 years he had been a constant visitor to the Tower. As secretary of the Privy Council, he had interrogated numerous prisoners on behalf of the State, several of them under torture. Many of those incarcerated owed their unfortunate position to his skill as an interrogator. He had risen from inquisitor to gaoler With a known hatred of Catholics and an extensive inside

knowledge of almost all previous plots against Queen Elizabeth, Waad's experience as both an 'intelligencer' and inquisitor made him the ideal candidate for the post of Lieutenant of the Tower of London shortly before the Gunpowder Plot. His early life and experiences produced a loyal servant of the State who was capable of dealing with foreign kings as well as common villains. He had been closely involved with the intelligence network operating in Elizabethan England and continued this association when James came to the throne. With years of experience dealing with informers, Waad knew how to extract information and how to discern plot from counter-plot. Waad's role in the

Gunpowder Plot and in the capture, interrogation and execution of the culprits are explored in detail. Proud of his achievements in bringing the perpetrators to justice, he erected a huge commemorative monument in his Governor's house at the Tower, which still exists today. Yet, despite his obvious success as Lieutenant of the Tower, he was eventually ousted from his post on suspicion of embezzlement, and narrowly escaped being indicted for murder. He retired to his 'farm' near the village of Manuden, Essex and was buried there in 1623.

Hierarchy is a central feature in the organisation of complex

biological systems and particularly the structure and function of neural networks. While other aspects of brain connectivity such as regionalisation, modularity or motif composition have been discussed elsewhere, no detailed analysis has been presented so far on the role of hierarchy and its connection to brain dynamics. Recent discussions among many of our colleagues have shown an increasing interest in hierarchy (of spatial, temporal and dynamic features), and this is an emerging key question in neuroscience as well as generally in the field of network science, due to its links with concepts of control, efficiency and development across scales (e.g. Hilgetag et

al. Science, 1996; Ravasz et al. Science, 2002; Bassett et al. PNAS, 2006; Mueller-Linow et al. PLoS Comp. Biol., in press). The proposed Research Topic will address recent findings from a theoretical as well as experimental perspective including contributions under the following four headings:

- 1) Topology: Detecting and characterizing network hierarchy;
- 2) Experiments: Neural dynamics across hierarchical scales;
- 3) Dynamics: Activity spread, oscillations, and synchronization in hierarchical networks;
- 4) Dynamics: Stable functioning and information processing in hierarchical networks.

In the years since the death of Mao Zedong, interest in Chinese writers and Chinese literature has risen significantly in the West. In 2000, Gao Xingjian became the first Chinese writer to receive the Nobel Prize for Literature followed by Mo Yan in 2012, and writers such as Ha Jin and Da Sijie have also become well known in the West. Despite this progress, the vast majority of Chinese writers remain largely unknown outside of China. This book introduces the lives and works of eighty contemporary Chinese writers, and focuses on writers from the "Rightist" generation (Bai Hua, Gao Xiaosheng, Liu Shaotang), writers of the Red Guard generation (Li Rui, Wang Anyi), Post-Cultural Revolution Writers, as well

as others. Unlike earlier works, it provides detailed, often first-hand, biographical information on this wide range of writers, including their career trajectories, major themes and artistic characteristics. In addition to this, each entry includes a critical presentation and evaluation of the writer 's major works, a selected bibliography of publications that includes works in Chinese, works translated into English, and critical articles and books available in English. Offering a valuable contribution to the field of contemporary Chinese literature by making detailed information about Chinese writers more accessible, this book will be of interest to students and scholars Chinese Literature, Contemporary Literature and Chinese Studies.

The Seven Basic Plots

CRC Press

Among the features that make Noiseless

Steganography: The Key to Covert Communications a first of its kind: The first to comprehensively cover Linguistic Steganography

The first to comprehensively cover Graph Steganography The first to comprehensively cover Game Steganography Although the goal of steganography is to prevent adversaries from suspecting the existence of covert communications, most books on the subject present outdated steganography approaches that are detectable by human and/or machine examinations. These approaches often fail because they camouflage data as a detectable noise by altering digital images, audio files, text, etc. However, such alteration raises suspicion and makes the message discernible by detecting its noise. Addressing such shortcomings, Noiseless Steganography: The Key to Covert Communications introduces a novel Noiseless Steganography Paradigm (Nostega). Rather than hiding data in

noise or producing noise, Nostega camouflages messages as well as their transmission in the form of unquestionable data in the generated steganographic cover. The book explains how to use Nostega to determine suitable domains capable of generating unsuspecting steganographic cover in which messages are embedded in the form of innocent data that is compatible with the chosen domain. It presents a number of Nostega-based methodologies, including but not limited to: A novel cover type that enables data to be hidden in plotted graphs A novel methodology that pursues popular games such as chess, checkers, crosswords, and dominoes to conceal messages Comprehensive coverage of linguistic steganography Several novel linguistic steganography methodologies based on

Natural Language Processing and Computational Linguistic techniques such as: Education-Centric-Based, Summarization-Based, Natural Language Generation Based, Random-Series-Based, Email Headers Based, Automatic Joke Generation Based, List-Based, and Automatic Notes Generation Based

The first book to provide comprehensive coverage of Linguistic Steganography, Graph Steganography, and Game Steganography, it discusses the implementation and steganalysis validation of ten Nostega-based methodologies. It describes how to establish covert channels by employing the selected domain to serve as justification for the interaction and delivery of the cover among the communicating parties. Instead of using contemporary steganography approaches

to camouflage your data as noise that is assumed to look innocent, the text provides you with the tools to prevent your adversaries from suspecting the existence of covert communications altogether.
