Essential strategies from Harold Kerzner on measuring project management performance The maze-like path of today's projects reflects a business environment that's growing in complexity. Factors influencing projects, such as new advancements in computer technology, an unpredictable economy, and the increase in stakeholder involvement make metrics and key performance indicators (KPI) for project management an important focus. Such measures are commonly used to help an organization define and evaluate how successful it is, typically, in terms of making progress towards its long-term organizational goals. Project Management Metrics, KPIs, and Dashboards helps functional managers gain a thorough understanding of what metrics are and how they can be best implemented to gain traction in a fast-paced and diverse working atmosphere. With content aligned with PMI's PMBOK® Guide, this book offers extensive coverage on KPIs and how they may be monitored, using techniques such as business dashboards to assist in prescribing meaningful business strategies. After reading

this book, functional managers will bolster their awareness of what good metrics management really entails—and be armed with the knowledge to measure performance more effectively. This book begins with basic KPI principles, helping functional managers deal with such key issues as: Successfully integrating KPIs and metrics into managing a project within a business strategy Important business dashboard techniques used in monitoring performance What is really important to different stakeholders in a project Managing resistance to change Next the book explores the key questions to ask before implementing a dashboard or reporting system. Some of these questions include: What are your needs? What is involved in integration? What's involved in operations and maintenance? What does the system cost? How long will the system last? Throughout the book, helpful illustrations clarify complex concepts and processes. These illustrations are also available as PowerPoint slides for course and seminar presentations.

Yes, it is a quick summary of the same thing. But I pinpoint what you need to pay attention to, because these will most likely be on the real exam. Step 3: Make sure you do the practice questions. Step 4: Check answer key and explanations. Each answer key also refers to the specific sections of your new PMBOK by page number. Step 5: Now repeat the steps 1-5 for every chapter. Ensure you have a big-picture view about the materials in each chapter. Also review the PM process map on P61 of your new PMBOK whenever you are done with a chapter. Step 6: When you finish all chapters, you would have a good view of all 10 knowledge areas. Now memorize the PM process map on P61 of your new PMBOK Let's review: the above steps should take you no more than 4 days even if you have only 2 hours each day. For some people it's possible to finish the materials during a weekend cram or study non-stop for a whole day (no more than 8 x 2 = 16 hours) Step 7: Now start mock exams. At the end of this book it provides Internet links to at least 4 online mock exams. Review the PM process map every time before you do the mock exam. How many exams you want to do is totally up to you. Always spend at least one hour to review each mock exam against new PMBOK. Step 8: Take a break (maybe one day or sleep one hour if you haven't done so for the past 24 hours) before the exam if necessary. Then you are ready!"
