New York Times bestseller for fans of First Man: A “brehtaking” insider history of NASA’s space program—from astronauts Alan Shepard and Deke Slayton (Entertainment Weekly). On October 4, 1957, the Soviet Union launched Sputnik I, and the space race was born. Desperate to beat the Russians into space, NASA put together a crew of the nation’s most daring test pilots: the seven men who were to lead America to the moon. The first into space was Alan Shepard; the last was Deke Slayton, whose irregular heartbeat kept him grounded until 1975. They spent the 1960s at the forefront of NASA’s effort to conquer space, and Moon Shot is their inside account of what many call the twentieth century’s greatest feat—landing humans on another world. Collaborating with NBC’s veteran space reporter Jay Barbree, Shepard and Slayton narrate in gripping detail the story of America’s space exploration from the time of Shepard’s first flight until he and eleven others had walked on the moon.

In the future world of Scorch, America is run by a “corporacracy.” Three conglomerates have taken control not by force but by manipulating common beliefs and values through the media, and particularly by playing on Americans’ fears of Big Brother. Consumerism and privatization have run amok in this landscape of flashing screens and subtle brainwashing, a world where even city streets and public schools are run by big business. This is a darkly comic first novel of a dystopian future, with echoes of 1984 and Brave New World.

The slowness with which the Highways Agency's PFI contract to widen the M25 was taken forward resulted in higher financing costs in the credit crisis. Moreover, the Agency was slow to investigate a potentially cheaper alternative to widening. An 18-month delay in preparing and finalizing the widening procurement meant that the contract was let in May 2009 at the height of the credit crisis. This increased the net present cost of the deal by £660 million (24 per cent) to £3.4 billion. The case for PFI was less convincing than the Agency thought owing to shortcomings in its cost estimation process. The Government had announced in 2003 its intention to reduce congestion on the M25. The Agency was starting to carry out trials at that time of an alternative, potentially cheaper solution of hard shoulder running (allowing drivers to use the hard shoulder at times of peak congestion), first tested in Europe in 1996. The NAO estimates the savings from a conventionally procured hard shoulder running solution might range between £400 million and £1.1 billion. The Agency, however, doubted the technique's suitability for one of the sections of the M25 being widened which has high traffic flow and whether operation and maintenance savings could be achieved through conventional procurement

Until now, the literature on innovation has focused either on radical innovation pushed by technology or incremental innovation pulled by the market. In Design-Driven Innovation: How to Compete by Radically Innovating the Meaning of Products, Roberto Verganti introduces a third strategy, a radical shift in perspective that introduces a bold new way of competing. Design-driven innovations do not come from the market; they create new markets. They don't push new technologies; they push new meanings. It's about having a vision, and taking that vision to your customers. Think of game-changers like Nintendo's Wii or Apple's iPod. They overturned our understanding of what a video game means and how we listen to music. Customers had not asked for these new meanings, but once they experienced them, it was love at first sight. But where does the vision come from? With fascinating examples from leading European and American companies, Verganti shows that for truly breakthrough products and services, we must look beyond customers and users to those he calls "interpreters" - the experts who deeply understand and shape the markets they work in. Design-Driven Innovation offers a provocative new view of innovation thinking and practice.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.
