"Human beings have forgotten their instructions" That is how many of the Native elders responded to Manitonquat when he traveled the continent over forty years ago seeking answers to the questions "What is wrong with people? Why is there war, violence, oppression, greed, injustice, poverty, indifference and destruction of the environment?" Sitting with and listening to many elders of First Nations from all parts of North America, he began to form a clearer idea of what they often called "the Original Instructions". All of Creation is formed by them – what some refer to as Natural Law, Dharma, or Tao. Those instructions for successful and happy relationships with families and communities and with all life, the Earth and the Cosmos, were passed down through the generations by elders of the indigenous peoples, who lived successfully and happily by them until they were invaded by newer cultures of domination, oppression and greed. These elders are becoming more rare as fewer and fewer young people have access to their wisdom and more and more follow the destructive ways of the dominant culture in materialism and self-centeredness. Manitonquat, a Wampanoag elder now in his 80th year, is a direct link to the old ways of the people. In a culture of domination there is more violence, more fear, more isolation, and less love and happiness than in the old ways of all people at one time, ways of cooperation and equality, of respect and relatedness and thanksgiving. Manitonquat was told by the elders that since he had been taught the skills of communication in the university he was meant to bring their teachings to the world (as they said they were not Indian but Human Being teachings), to any who sought and wished for that knowledge. Doing that in books and talks all over the world, he has acquired added insight into the problems of society today and a unique perspective in bringing circles to many prisons weekly for the past 25 years.

Mit dem Erwerb des gesamten altdeutschen Gemäldebestandes der ehemals Fürstlich Fürstenbergischen Sammlungen Donaueschingen, einer der bedeutendsten und erlesensten privaten Sammlungen spätmittelalterlicher Kunst, hat die Sammlung Würth einen neuen Schwerpunkt erhalten. Neben bekannten Meistern der oberrheinischen Malerei des 15. und 16. Jahrhunderts, darunter Hans Holbein d. Ä., dem Meister von Meßkirch, Lucas Cranach d. Ä und d. J., Bernhard Striegel oder Hans Schäufelin gehören auch weniger bekannte Künstler, die in ihrer Kunstfertigkeit und Bedeutung den prominenten Künstlern jedoch keinesfalls nachstehen, dem Gemäldekonvolut an. Es ist die Epoche des religiösen und kulturellen Umbruchs, in der neben frommen Beweggründen die Konkurrenz zwischen verschiedenen Familien und Gruppen der Städte zu einer Vielzahl von Kunstaufträgen führten. Das historische Umfeld im Hinblick auf die Folgen zu beleuchten, die sich an der Umgestaltung überlieferter Themen ablesen lassen ist ebenso Teil der vorliegenden Publikation, wie die bislang umfassendste ikonographische Sichtung der Malerei, die es sich zur Aufgabe gemacht hat, die Inhalte der Darstellungen und deren Bedeutung nachvollziehbar werden zu lassen. Für dieses Unterfangen konnten mit Dietmar Lüdke und Kurt Löcher zwei der besten Kenner spätmittelalterlicher deutscher Malerei und Malerei der frühen Neuzeit gewonnen werden. Zusätzliche Beiträge von Christoph Graf Douglas zur Genese der Sammlung sowie von Beate Elsen-Schwedler zum

kulturhistorischen Hintergrund dieses beutenden Abschnitts europäischer Geschichte runden den Band ab.

Most occupational safety and health books explain how to apply concepts, principles, elements, tools of prevention and develop interventions, and initiatives to mitigate occupational injuries, illnesses and deaths. This is not a how-to book. It is a book that addresses the philosophical basis for all of the varied components and elements needed to develop and manage a safety and health program. It is a book designed to answer the questions often posed as to why should we do it this way. It is the “Why” book and the intent is to provide a blueprint and a helpmate for the philosophical basis for occupational safety and health and the justification as an integral component of doing business.

This book is the second of two volumes presenting a business model to add value through Procurement. Including several case studies of successful implementation, it demonstrates how the increasing complexity of the business environment requires a significant intervention on the management of processes and information within individual organizations and through inter-company relations. Agile Procurement presents the application of the Agile method which optimizes and digitizes processes in order to reduce wastage and defects. As a method, tool and a culture aimed at effectiveness, efficiency and economy of organizations, Agile Procurement requires a change of paradigm. This volume examines these areas of improvement and presents best practice in the digitization of the processes. The last chapter examines the near future developments of the procurement, which the author labels Procurement 4.0. It presents also how new solutions, like Blockchain, could revolutionize procurement.

Although solar thermal systems are technologically mature and cost effective, they have not yet been sufficiently used in building design to play an adequate role in the reduction of fossil fuel consumption. One main hindrance to adoption is the generally low architectural design quality of the building integration of these thermal systems. Starting from a definition of architectural integration quality and related criteria, this book is intended to help both architects and manufacturers improve their design work.

This book is a comprehensive introduction to nanoscale materials for sensor applications, with a focus on connecting the fundamental laws of physics and the chemistry of materials with device design. Nanoscale sensors can be used for a wide variety of applications, including the detection of gases, optical signals, and mechanical strain, and can meet the need to detect and quantify the presence of gaseous pollutants or other dangerous substances in the environment. Gas sensors have found various applications in our daily lives and in industry. Semiconductive oxides, including SnO2, ZnO, Fe2O3, and In2O3, are promising candidates for gas sensor applications. Carbon nanomaterials are becoming increasingly available as “off-the-shelf” components, and this makes nanotechnology more exciting and approachable than ever before. Nano-wire based field- effect transistor biosensors have also received much attention in recent years as a way to achieve ultra-sensitive and label-free sensing of molecules of biological interest. A diverse array of semiconductor-based nanostructures has been synthesized for use as a photoelectrochemical sensor or biosensor in the detection of low concentrations of analytes. A novel acoustic sensor for structural health monitoring (SHM) that utilizes lead zirconate titanate (PZT) nano- active fiber composites (NAFCs) is described as well.

often described as the "fifth façade", the flat roof is extremely popular with architects. Its essential task is to shelter the space beneath it from the elements. Beyond this, the use of flat roofs may be optimized by integrating them as green roofs, roof terraces, circulation areas, and even productive solar roofs. In practice, however, their correct and professional realization is a highly exacting task: in addition to providing the planner with basic rules of construction and design, the Flat Roof Manual also supplies an overview of the use and construction types as well as the

standard assemblies for flat roofs. Together with the most important standards and bodies of regulations, construction drawings of the principal connection points round out the volume.

The imperative for responsible innovation in the nanotechnology domain has inspired and provoked assorted views on its trajectory, potential implications as well as appropriate pathways for its development across a spectrum of stakeholders. These debates assume greater significance in the context of developing nations since harnessing the inherent potential of this transformational technology presumes the establishment of simultaneous capabilities to cutting-edge technological innovation as well as risk governance, regulation and public engagement in an environment challenged by limited resources, weak innovation systems and inadequate abilities for risk management. This book seeks to examine developments, opportunities, concerns and challenges in nanotechnology from a developing country perspective raising complex questions and issues in the course of the responsible development of nanotechnology. It covers a range of issues such as potential R & D prospects, S&T capacities and innovation systems, issues of environment, health and safety, risk and regulatory preparedness, and prospective socio-economic and ethical repercussions, with a focus on Indian developments. Based on half a decade of interdisciplinary research and informed by multi-stakeholder insights on the aforementioned aspects, it proposes options for effective and inclusive governance for nanotechnology in India.

Timber construction is one of the most prevalent methods of constructing buildings in North America and an increasingly significant method of construction in Europe and the rest of the world. Timber Engineering deals not only with the structural aspects of timber construction, structural components, joints and systems based on solid timber and engineered wood products, but also material behaviour and properties on a wood element level. Produced by internationally renowned experts in the field, this book represents the state of the art in research on the understanding of the material behaviour of solid wood and engineered wood products. There is no comparable compendium currently available on the topic - the subjects represented include the most recent phenomena of timber engineering and the newest development of practice-related research. Grouped into three different sections, 'Basic properties of wood-based structural elements', 'Design aspects on timber structures' and 'Joints and structural assemblies', this book focuses on key issues in the understanding of: timber as a modern engineered construction material with controlled and documented properties the background for design of structural systems based on timber and engineered wood products the background for structural design of joints in structural timber systems Furthermore, this invaluable book contains advanced teaching material for all technical schools and universities involved in timber engineering. It also provides an essential resource for timber engineering students and researchers, as well as practicing structural and civil engineers.
