Microsoft's .NET strategy embraces a vision for integrating diverse elements of computing technology and data services. The wireless Internet and mobile devices are core components of that strategy. Visual Studio .NET includes a powerful set of tools for developing websites and applications that can be accessed from all kinds of mobile devices. .NET Wireless Programming provides the technical details

you need to master to develop end-to-end wireless solutions based on .NET technology. You'll learn to take advantage of the Mobile Internet Toolkit's automated deployment capabilities, which enable a single site or application to work with nearly any mobile device. Freed from the task of writing code to accommodate various devices, you'll be able to apply other skills to build a more powerful application: Work with styles and templates. Create custom controls. write to databases. And use Microsoft's Web Services in support of a distributed architecture. Five case studies, including a mobile intranet, a contacts database, and an online game, illustrate solutions to real problems and techniques for maximizing application flexibility. A set of appendices provide detailed information on the WML language and the Toolkit's classes. This book presents its many code examples in Visual Basic .NET, but the greater emphasis is on Visual

Studio .NET and the flexibility it gives developers in choosing the language they want to use.

Global Publishing

Telehealth -- the delivery of health services and clinical information from a distance -- has reached new levels with the communication revolution of the last decade: consumer

videoconferencing, mobile devices, high bandwidth infrastructure and close range wireless sensor networks have made many advances possible in the field. New specialized clinical applications and markets have also emerged. These include tele-homecare, tele-rehabilitation and tele-emergency, surveillance and disaster response, while ideas which once seemed futuristic, such as tele-procedures and tele-surgery, are now seen as being within the realms of possibility. This book

---

contains selected papers from the 2010 Global Telehealth conference, hosted by the Australasian Telehealth Society. They cover a broad spectrum, from successfully completed projects to work in progress. The papers chosen for publication are all deemed to have lasting value, and to capture the international diversity and scope of contemporary telehealth developments. Two aspects which remain elusive in advancing telehealth deployment, both in developed countries and the

developing world, are widely accepted evidence for the clinical and economic benefits of telehealth and the development of policy and business modeling drivers which will speed their adoption. The studies presented here exemplify precisely the type of work required to overcome these obstacles and the book will be of interest to all those involved in advancing the efficiency and effectiveness of healthcare throughout the world.
