Explores the science
and creative process
behind Poe's
cosmological treatise.
In 1848, almost a year
and a half before Edgar
Allan Poe died at the
age of forty, his book
Eureka was published.
In it, he weaved
together his scientific
speculations about the
universe with his own
literary theory,
theology, and

philosophy of science.
Although Poe himself
considered it to be his
magnum opus, Eureka
has mostly been
overlooked or
underappreciated,
sometimes even to the
point of being thought
an elaborate hoax.
Remarkably, however,
in Eureka Poe
anticipated at least nine
major theories and
developments in
twentieth-century
science, including the
Big Bang theory,
multiverse theory, and
the solution to Olbers
paradox. In this
book the first devoted
specifically to Poe's
science side David N.
Stamos, a philosopher
of science, combines
scientific background
with analysis of Poe's

life and work to highlight the creative and scientific achievements of this text. He examines Poe's literary theory, theology, and intellectual development, and then compares Poe's understanding of science with that of scientists and philosophers from his own time to the present. Next, Stamos pieces together and clarifies Poe's theory of scientific imagination, which he then attempts to update and defend by providing numerous case studies of eureka moments in modern science and by seeking insights from comparative biography and psychology,

cognitive science, neuroscience, and evolution. Edgar Allan Poe, *Eureka*, and *Scientific Imagination* is the most comprehensive treatment of *Eureka* that has yet been published. It is staggeringly thorough in its analysis of Poe's book, but it also shows how Poe's theories of cosmogony and cosmology ramify into his fiction and poetry, especially the tales of ratiocination. Stamos takes *Eureka* seriously, and he does so with the empirical undergirding of vast amounts of scientific scholarship and literary criticism.

The hauntingly prophetic classic novel set in a not-too-distant future where books are burned by a special task force of firemen. 'Another indispensable classic' The Times 'Ray Bradbury's gift for storytelling reshaped our culture and expanded our world' Barack Obama Guy Montag is a fireman. His job is to burn books, which are forbidden, being the source of all discord and unhappiness. Even so, Montag is unhappy; there is discord in his marriage. Are books hidden in his house? The Mechanical Hound of the Fire Department, armed with a lethal hypodermic, escorted by helicopters, is ready to track down those dissidents who defy society to

preserve and read books. The classic dystopian novel of a post-literate future, Fahrenheit 451 stands alongside Orwell's 1984 and Huxley's Brave New World as a prophetic account of Western civilization's enslavement by the media, drugs and conformity. Bradbury's powerful and poetic prose combines with uncanny insight into the potential of technology to create a novel which, decades on from first publication, still has the power to dazzle and shock.
