A magic healer must stop a villainous king and his army of undead soldiers in

this fantasy adventure by the bestselling author of *Touch of Power*. As the last Healer in the Fifteen Realms, Avry of Kazan is in a unique position: in the minds of friends and foes alike, she no longer exists. Despite her need to prevent the megalomaniac al King Tohon from winning control of

the Realms, Avry is also determined to find her sister and repair their estrangement. And she must do it alone, as Kerrick, her partner and sole confidant, returns to Alga to summon his country into battle. Though she should be in hiding, Avry will do whatever she can to support Tohon's opponents.

Including infiltrating a holy army, evading magic sniffers, teaching forest skills to soldiers and figuring out how to stop Tohon's most horrible creations yet: an army of the walking dead-human and animal alike and nearly impossible to defeat. War is coming and Avry is alone.

 An illustrated tour of the structures and patterns we call "math" The only numbers in this book are the page numbers. Math Without Numbers is a vivid, conversational, and wholly original guide to the three main branches of abstract math—topology, analysis, and algebra—which turn out to be surprisingly easy to grasp. This book upends the conventional approach to math, inviting you to think

creatively about shape and dimension, the infinite and infinitesimal, symmetries, proofs, and how these concepts all fit together. What awaits readers is a freewheeling tour of the inimitable joys and unsolved mysteries of this curiously powerful subject. Like the classic math allegory *Flatland*, first published over a century ago, or Douglas Hofstadter's *Godel, Escher, Bach* forty years ago, there has never been a math book quite like *Math Without Numbers*. So many popularizations of math have dwelt on numbers like pi or zero or infinity. This book goes well beyond to questions such as: How many shapes are there? Is

anything bigger than infinity? And is math even true? Milo Beckman shows why math is mostly just pattern recognition and how it keeps on surprising us with unexpected, useful connections to the real world. The ambitions of this book take a special kind of author. An inventive, original thinker pursuing his calling with jubilant passion. A prodigy. Milo Beckman completed the graduate-level course sequence in mathematics at age sixteen, when he was a sophomore at Harvard; while writing this book, he was studying the philosophical foundations of physics at Columbia under Brian Greene, among others.
