"Many interesting  
developments have  
occurred in the world of  
venture capital since the  
publication of the first  
edition of this book in 2006,  
which prompted us to  
revise the book for the  
second edition. While the  
organization of the book  
remains unchanged, many  
of the chapters are  
substantially rewritten. For  
example, in Chapter 5, we  
re-ranked top VC firms,  
incorporating the latest  
performance statistics,  
fundraising and investment  
activities, notable exits, and

(as always) our subjective  
opinions. In Chapter 6, we  
examine further evidence of  
the deepening globalization  
of the industry. In Chapters  
3, 4, and 7, we analyze the  
impact of the 1999-2000  
Internet bubble years on the  
VC risk and returns, as  
investments made in those  
years are finally mature and  
thus now a part of the  
performance evaluation  
analysis. We also  
incorporated expositional  
improvements throughout  
the book based on reader  
feedback on the first  
edition. Another feature of  
the new edition is that the  
VCV model, used

extensively in Part III of the book, is now available as a Web-based application available on <http://VCVtools.com>. Significant collaborative efforts went into developing this tool, which we believe will be of interest to a broad audience, including practitioners interested in valuing VC-backed company stocks and employee stock options" Woodhead Publishing A list of U.S. importers and the products they import. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking	closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO <sub>2</sub> emissions and the	dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs?
