The United States developed the Gambit and Hexagon programs to improve the nation's means for peering over the iron curtain that separated western democracies from east European and Asian communist countries. The inability to gain insight into vast "denied areas" required exceptional systems to understand threats posed by US adversaries. Corona was the first imagery satellite system to help see into those areas. Hexagon began as a Central Intelligence Agency (CIA) program with the first concepts proposed in 1964.

The CIA's primary goal was to develop an imagery system with Corona-like ability to image wide swaths of the earth, but with resolution equivalent to Gambit. Such a system would afford the United States even greater advantages monitoring the arms race that had developed with the nation's adversaries. The Hexagon mapping camera flew on 12 of the 20 Hexagon missions. It proved to be a remarkably efficient and prodigious producer of imagery for mapping purposes. The mapping camera system was successful by every standard including technical capabilities, reliability, and capacity.

This book offers a biography of the most glamorous and powerful NATO Supreme Commander of the Cold War, General Lauris Norstad, as both a "nuclear" general and an "international" general. His primary goal was to keep the Alliance together as he accommodated British and French nuclear ambitions while forestalling the same in West Germany. He also was at the center of the political/military maneuverings over Berlin and the Soviet attempt to blackmail the West into recognizing East Germany, all of which culminated in the building of the infamous "Wall."
