With mountains of documentation, mostly from government and corporate sources, Sutton shows that Soviet military technology is heavily dependent on U.S. and allied gifts, "peaceful trade" and exchange programs. We've built for, sold or traded, or given outright to the Communists everything from copper wiring and military trucks to tank technology, missile guidance technology, computers - even the Space Shuttle. Peaceful trade is a myth ... to the Soviets all trade is strategic. The paradox is that we spend \$300 billion a year on a defense against an enemy we created and continue to keep in business. The deaf mute blindmen, as Lenin called them, are the multi-national businessmen who see no further than the next contract, who have their plants defended by Marxist troops (in Angola); who knowingly sell technology that comes back to kill and maim Americans.

Tens of thousands of mechanical engineers are engaged in the design, building, upgrading, and optimization of various material handling facilities. The peculiarity of material handling is that there are numerous technical solutions to any problem. The engineer's personal selection of the optimal solution is as critical as the technical component. Michael Rivkin, Ph.D., draws

on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight topics such as: • physical principles of various material handling systems; • considerations in selecting technically efficient and environmentally friendly equipment; • best practices in upgrading and optimizing existing bulk material handling facilities; • strategies to select proper equipment in the early phases of a new project. Filled with graphs, charts, and case studies, the book also includes bulleted summaries to help mechanical engineers without a special background in material handling find optimal solutions to everyday problems.

An inspiring tale of creativity and determination on the Underground Railroad from Coretta Scott King Award winner James Ransome and acclaimed author Deborah Hopkinson. Clara, a slave and seamstress on Home Plantation, dreams of freedom—not just for herself, but for her family and friends. When she overhears a conversation about the Underground Railroad, she has a flash of inspiration. Using scraps of

cloth from her work in the Big House and scraps of information gathered from other slaves, she fashions a map that the master would never even recognize. . . . From the award-winning author-illustrator team of Deborah Hopkinson and James Ransome, this fictional tale of the Underground Railroad continues to inspire young readers 25 years after its original publication. With the 1998 debut of its V92C, Victory Motorcycles became the New American Motorcycle. Victory's innovative, stylish heavyweight cruiser motorcycles attracted a loyal, hard-riding following, but not the market share needed to survive. This richly illustrated book covers the brand's history model-by-model and analyzes why the parent company announced in early 2017 that its Victory division would cease operation. This book also features a full reprint of the collectible first Victory history from 1998, *The Victory Motorcycle*.

This volume, the Frank Gerstein Lectures for 1963, is the second series of Invitation Lectures to be delivered at York University. The theme "Imagination and the University" was appropriate for, as President Murray Ross states in this Foreword, it is in its early years that a university is sufficiently flexible to utilize imagination in its structure and in its curriculum. York University was in its third year when the Lectures were given. Four distinguished scholars present their views on the importance of an imaginative approach to the different academic disciplines, and to the conduct of life in contemporary society as a whole. Jacob Bronowski, speaking on Imagination in Art and Science, draws a clear and striking analogy between the role of imagination in mathematics and in poetry, drawing on his own experiences and contributions in both areas. He stresses that all creative works in art or science, must conform to the universal experience of mankind and to the private experiences of each man: the work of science, as of art, moves us profoundly, in mind and in emotion, when it matches our experience and at the same time points beyond it. Henry Steele Commager shows how important is the contribution to be made by an imaginative approach to politics, where, as in other fields of human experience, it must not be separated from reality, if it is to find expression in something more than words. He points to examples from the past and the present and asks for more imagination in public thinking, it fit our actions to the reality of change, citing the urgency of such twentieth-century phenomena as the status of Communist China, the predicted population explosion, and the threat of nuclear war. Professor Commager believes that the universities provide the key to this kind of approach, being a supreme example of the creative capacity of mankind, whose function it is to serve the commonwealth of learning. A different kind of insight is offered by Gordon W. Allport, whose subject is Imagination in Psychology. He believes that the present "impertinence" of psychology can best be cured by endowing it with more imagination. He demands a pluralistic approach to psychological investigation, which would not deny the insights yielded by traditional methods, with their characteristic minute analyses, but whose goal would be to fashion a conception of the human person that would exclude nothing that is valid, and at the same time preserve an ideal of rational consistency. This could lead, in turn, to a clear definition of the root motives of mankind, even to discovering new formulas for international peace by offsetting particularistic political demands. Finally, Paul H. Buck describes the Harvard House Plan as an example of Imagination and the Curriculum. This plan, modelled on the Oxford-Cambridge College system which is also followed in some Canadian universities, is an attempt to make all aspects of undergraduate life a process of education. And a truly liberal education for today and tomorrow, Professor Buck is confident, will combine a programme of general education, a programme of specialism, and a collegiate way of living.
