Choosing and Using a
Refracting Telescope has been written for the many amateur astronomers who already own, or are intending to purchase, a refracting telescope – perhaps to complement their existing arsenal of larger reflecting telescopes – or for the specialist who requires a particular refractor for serious astronomical applications or nature studies. Four hundred years ago, during the winter of 1609, a relatively unknown Italian scientist, Galileo Galilei designed a spyglass with two crude lenses and turned it

skyward. Since then, refractors have retained their dominance over all types of reflector in studies of the Moon, planets and double stars because of the precision of their optics and lack of a central obstruction in the optical path, which causes diffraction effects in all commercially-made reflectors. Most mature amateur astronomers got started with a 60mm refractor, or something similar. Thirty years ago, there was little choice available to the hobbyist, but in the last decade long focus crown-flint achromats have moved aside for some exquisitely crafted

apochromatic designs offered by leading commercial manufacturers. There has been a huge increase in the popularity of these telescopes in the last few years, led by a significant increase in the number of companies (particularly, William Optics, Orion USA, StellarVue, SkyWatcher and AstroTech) who are now heavily marketing refractors in the amateur astronomical magazines. In Choosing and Using a Refracting Telescope, well-known observer and astronomy writer Neil English celebrates the remarkable history and

evolution of the refracting telescope and looks in detail at the instruments, their development and their use. A major feature of this book is the way it compares not only different classes of refractor, but also telescopes of each class that are sold by various commercial manufacturers. The author is perhaps uniquely placed to do this, having used and tested literally hundreds of different refracting telescopes over three decades. Because it includes many diverse subjects such as imaging with consumer-level digital cameras, imaging with webcams, and imaging with

astronomical CCD cameras — that are not covered together in equal depth in any other single volume — *Choosing and Using a Refracting Telescope* could become the ‘refractor bible’ for amateur astronomers at all levels, especially those who are interested in imaging astronomical objects of every class.

To the admirer of farm machinery in all its gritty splendor, the tractor is more than the mechanical workhorse of the modern field. It is a testament to American know-how, a work of mechanical art truly in the American grain. Among these hard-working

machines, Ford tractors hold a special place after nearly a century of bringing innovation, dependability, and good old American muscle to farms and fields worldwide. This book provides a hands-on guide to restoring these venerable machines from the ground up, from the first models made to those produced as recently as 1965. With hundreds of full-color photographs, the guide is not just clear and easy-to-follow, but also a feast for the eyes for tractor aficionados.	Beginning at the beginning--how to choose and buy your tractor--Tharran Gaines takes readers through step-by-step directions for the complete restoration of Fordson, Ford-Ferguson, and Ford tractors. In straightforward terms he covers everything from troubleshooting and disassembly to engine and gearbox rebuilds, electrical work, reassembly, painting, and post-restoration care and maintenance. Informative photographs and proven tips,	techniques, and money-saving advice from experienced restorers make the book an invaluable resource for amateur mechanic and professional alike. From Antarctica to Outer Space:
Life in Isolation and Confinement
aims to revitalize and encourage
behavioral research in spaceflight
as well as in polar and
comparable settings. It comprises
a broad collection of papers that
evolved from presentations at a
three day conference entitled The
Human Experience in Antarctica:
Applications to Life in Space

(The Sunnyvale Conference). This
conference was co-sponsored by
the Division of Polar Programs of
the National Science Foundation
and the National Aeronautics and
Space Administration and held in
1987. The book provides, through
firsthand accounts and research
reviews, an introduction to the
human facet in isolated and
confined environments such as
Antarctica, outer space,
submarines, and remote national
parks. The book discusses some of
the theoretical issues underlying
research on isolated and confined
people, thus demonstrating the
applicability of certain general
theories of behavior. It also
focuses on basic psychological and
social responses to isolation and

confinement. Studies whose primary purpose is to explore the effects of selection, training, and environmental design on human behavior and mission outcomes are discussed.
