Automating Vision explores the rise of seeing machines through four case studies: facial recognition, drone vision, mobile and locative media and driverless cars. Proposing a conceptual lens of camera consciousness, which is drawn from the early visual anthropology of Gregory Bateson and Margaret Mead, Automating Vision accounts for the growing power and value of camera technologies and digital image processing. Behind the smart camera devices examined throughout the book lies a set of increasingly integrated and automated technologies underpinned by artificial intelligence, machine learning and image processing. Seeing machines are now implicated in growing visual data markets and are supported by emerging layers of infrastructure that they coproduce. In this book, Anthony McCosker and Rowan Wilken address the social impacts, the disruptions and reconfigurations to existing digital media ecosystems, to urban environments and to mobility and social relations that result from the increasing automation of vision and explore how it might be possible to ensure a safe and equitable future as we learn to see with and negotiate the interventions of seeing machines. This book will appeal to students and scholars in media, communication, cultural studies, sociology of media and science and technology studies. Edwin Land and Polaroid, the company he created in the 1930s, have spawned many bold scientific innovations over the years. Most of them led quickly to unique commercial products. Best known for revolutionary instant photography systems, Land and Polaroid also achieved miracles in light-polarizing technology that is embedded in

many of today's consumer products. During World War II, Polaroid manufactured and created a large array of products for the U.S. military; later, Land's top-secret cold war initiatives led to crucial intelligence breakthroughs. Polaroid features images of signature innovations, scientists, and photographers who pioneered the use of Polaroid film.

What makes Polaroid photography stand out? Since its invention by Edwin Land in 1947, how has it crept into our common culture in the ways we witness today? Writing in the context of the two bankruptcies of Polaroid Corporation and the decline and obsolescence of its film, Peter Buse argues that Polaroid photography is distinguished by its process. The fact that, as the "New York Times" put it, the camera does the rest, encouraged distinctive practices by the camera s users, including its most famous use: as a party camera. Polaroid was often dismissed as a toy, but this book takes its status as a toy seriously, considering the way it opened up photographic play while simultaneously lowering its own cultural value. Drawing on unprecedented access to the archives of the Polaroid Corporation, Buse paints Polaroid as an intimate form, where the photographer, photograph, and photographed are in close proximity in time and space. This has profound implications for the photographic practices Polaroid cameras permit and encourage, such as the sexual Polaroid, evidence of which the author pulls from literature, film, and pop culture, or Polaroid as a form of play, a fun technology, an ice breaker that can make things happen. Buse also tells the story of Polaroid s response as a company to developments in digital imaging and its ultimately doomed hard-copy wager in the face of them. Pushing further, he explores the continuities and discontinuities between Polaroid and digital snapshot practices, reflecting on what Polaroid can tell us about digital photography today. "

This book is a facsimile of an album of Eggleston's Polaroids assembled by the photographer himself, and containing the only photos he made in this medium. Consisting of 56 images taken with the Polaroid SX-70 (the now cult camera produced between 1972 and 1981) and handmounted in a black leather album also produced by the company, Polaroid SX-70 is the first publication of Eggleston's Polaroids. The gloriously mundane subjects of these photos--a Mississippi street sign, a telephone book, stacked crates of empty soda bottles--are familiar Eggleston territory, but fascinatingly all of these Polaroids were taken outdoors. They are rare records of Eggleston's strolls or drives in and around Mississippi, complement the majority of his work made with color negative film or color slides, and show his ironic flair for photo-sequencing in book form. Something new always slowly changes right in front of your eyes--it just happens. -- William Eggleston

A powerful collection of the luminous last work by one of the true giants of twentieth-century photography. After the death of his wife, André Kertész consoled himself by taking up a new camera, the Polaroid SX70. As with earlier equipment, he mastered the camera and produced a provocative body of work that both honored his wife and lifted him out of depression. Here Kertész dips into his reserves one last time, tapping new people, ideas, and tools to generate a whole new body of work through which he transforms from a broken man into a youthful artist. Taken in his apartment just north of New York City's Washington Square, many of these photographs were shot either from his window or in the windowsill. We see a fertile mind at work, combining personal objects into striking still lifes set against cityscape backgrounds, reflected and transformed in glass surfaces. Almost entirely unpublished work, these photographs are a testament to the genius of the photographer's eye as manifested in the simple Polaroid.
