Breaking new ground as the first transdisciplinary reader on video theory, Video Theories is a resource that will form the basis for further research and teaching. With video regarded as a ubiquitous medium, it's surprising that video theory as an academic discipline has not yet been established in comparison to the more canonized theories of photography, film, and television. This "video gap" in media theory is remarkable considering today's omnipresence of the medium through online video portals (such as Youtube, Vimeo, Snapchat or Instagram). Video technologies address us in our everyday online tasks, and they have opened up and superseded text-based web browsers in many aspects.

Consisting of a selection of annotated source texts and chapter introductions written by the editors, this book takes into account fifty years of scholarly and artistic reflections on the topic, representing an intergenerational and international set of voices. This is also accompanied by a timeline to help contextualize and frame the techno-cultural developments of video since the analog days.

Theorists and artists old and new, like Jacques Derrida, Marshall McLuhan, Jean-Luc Godard and Paul Virilio, are joined together in this unique collection with almost half the work translated into English for the first time. This transdisciplinary reader offers a conceptual framework for diverging and contradictory viewpoints, following up the continuous transformations of what was / is / will be video.

One of the most comprehensive books to focus on the relationship between cinema and the other arts, this volume explores types and stylistic devices of intermediality through a wide range of case studies. It addresses major theoretical issues and highlights the relevance of intermedial relations in film history, mapping the theoretical field by outlining its main concepts and the

research avenues pursued in the study of cinematic intermediality, including the most recent approaches and methodologies. It also presents some major templates of intermediality through various examples from world cinema, including closer looks at films by auteurs like Alfred Hitchcock, Michelangelo Antonioni, Jean-Luc Godard, and Agnès Varda. Supplemented by three new chapters dealing with phenomena which came into view since its first publication, the revised and enlarged edition of this ground-breaking volume will serve as a useful handbook to clarify key ideas and to offer insightful analyses.
