The Economic Contribution of the California Air Pollution Control Industry

Routledge

"A zany and provocative cultural history" of LA's infamous air pollution and the struggle to combat it from the 1940s to today (Kirkus). The smog beast wafted into downtown Los Angeles on July 26, 1943. Nobody knew what it was. Secretaries rubbed their eyes. Traffic cops seemed to disappear in the mysterious haze. Were Japanese saboteurs responsible? A reckless factory? The truth was much worse—it came from within, from Southern California's burgeoning car-addicted, suburban lifestyle. Smogtown is the story of pollution, progress, and how an optimistic people confronted the epic struggle against airborne poisons barraging their hometowns. There are scofflaws and dirty deals aplenty, plus murders, suicides, and an ever-present paranoia about mass disaster. California based journalists Chip Jacobs and William J. Kelly highlight the bold personalities involved, the corporate-tainted science, the terrifying health costs, the attempts at cleanup, and how the smog battle helped mold the modern-day culture of Los Angeles.

California has a world-wide reputation as a pioneer of innovative policies for the control of air pollution by motor vehicles. This book analyzes the difficulties which the state has encountered in developing and implementing these policies.

Methods Development for Assessing Air Pollution Control Benefits: Experiments in valuing non-market goods : a case study of alternative benefit measures of air pollution control in the south coast air basin of southern California University of California Press
During the 20th century, the city of Los Angeles diverted surface water flowing into Owens Lake for water supply, transforming the large, closed-basin, saline lake into a small

brine pool surrounded by dry playa. Under highpolicy.

winds, the exposed lakebed produced large amounts of airborne dust, resulting in the highest concentrations of airborne particulate matter with an aerodynamic diameter of 10 micrometers or less (PM10) in the United States. Since 2000, the Los Angeles Department of Water and Power, at the direction of the Great Basin Unified Air Pollution Control District, has been constructing and implementing dust control measures on the dry lakebed, with the objective of meeting the U.S. Environmental Protection Agency National Ambient Air Quality Standards for PM10 and the PM10 standards set by the state of California. Many of the dust control measures used at Owens Lake require large amounts of water, energy, and maintenance to sustain their performance. Effectiveness and Impacts of Dust Control Measures for Owens Lake evaluates the effectiveness of alternative solutions for their degree of PM10 reduction and the extent that they reduce use of water in controlling dust emissions. This report considers the associated energy and environmental and economic impacts of these proposed measures and assesses their durability and reliability.

Water Pollution Study Edward Elgar Publishing
This study, first published in 1990, explores the ways in which institutions can succeed or fail at environmental improvement. The author first takes a look at the nature of environmental politics and the history of air pollution control in Southern California. He then develops a political economic model that asks the question: what effect have the dramatic changes that have occurred throughout the history of air pollution control in Southern California had on air quality? Jeffry Fawcett uses the information gathered to both evaluate the relationship between air quality and institutional change; and to evaluate how political economists explain how state environmental institutions work. This title will be of interest to students of environmental economics and
