**Shakespeare the Dramatist** Humana Press

Suppose fate placed you on an inflatable life-raft in the middle of the freezing Atlantic Ocean along with your most bitter enemy contrivable? Would the emotions of hatred, revenge and love of country trump the desire to survive, if killing that enemy ensured your own demise? Captain Mat Richardson, USN, and Emil Gluckler, a

German submarine commander, experience that option during the 2nd World War. Mat, captain of a small destroyer, and Emil, commander of an attacking submarine, become stranded on a life-raft after each of the combatant crafts sink each other during a fierce naval engagement. They subsequently experience 38 harrowing days striving for survival. If nothing else, this required the ultimate in mutual cooperation. If the two survived, would the events have a lasting effect on their relationship? Or, if one had the opportunity to kill the other at a later date in a new war-time circumstance, would he do so, or not? Continual service improvement Springer Web-based Support Systems (WSS) are

an emerging multidisciplinary research area in which one studies the support of human activities with the Web as the common platform, medium and interface. The Internet affects every aspect of our modern life. Moving support systems to online is an increasing trend in many research domains. One of the goals of WSS research is to extend the human physical limitation of information processing in the information age. Research on WSS is motivated by the challenges and opportunities arising from the Internet. The availability, accessibility and flexibility of information as well as the tools to access this information lead to a vast amount of opportunities. However, there are also many challenges we face. For instance, we have to deal with more complex tasks, as there are increasing demands for quality and productivity. WSS

research is a natural evolution of the studies on various computerized support systems such as Decision Support Systems (DSS), Computer Aided Design (CAD), and Computer Aided Software Engineering (CASE). The recent advancement of computer and Web technologies make the implementation of more feasible WSS. Nowadays, it is rare to see a system without some type of Web interaction. The research of WSS is classified into four groups.

Software Architecture 2 Springer

One criterion for classifying books is whether they are written for a single purpose or for multiple purposes. This book belongs to the category of multipurpose books, but one of its roles is predominant—it is primarily a textbook. As such, it can be used for a variety of courses at the first-year graduate or upper-division undergraduate level. A common

---

characteristic of these courses is that they cover fundamental systems concepts, major categories of systems problems, and some selected methods for dealing with these problems at a rather general level. A unique feature of the book is that the concepts, problems, and methods are introduced in the context of an architectural formulation of an expert system referred to as the general systems problem solver or aSPS-whose aim is to provide users of all kinds with computer-based systems knowledge and methodology. The aSPS architecture, which is developed throughout the book, facilitates a framework that is conducive to a coherent, comprehensive, and pragmatic coverage of systems fundamentals-concepts, problems, and methods. A course that covers systems fundamentals is now offered not only in systems science, information science, or systems engineering programs, but in many programs in other disciplines as well. Although the level of coverage for systems science or engineering students is surely different from that used for students in other disciplines, this book is

designed to serve both of these needs.

Over the past 20 years, software architectures have significantly contributed to the development of complex and distributed systems. Nowadays, it is recognized that one of the critical problems in the design and development of any complex software system is its architecture, i.e. the organization of its architectural elements. Software Architecture presents the software architecture paradigms based on objects, components, services and models, as well as the various architectural techniques and methods, the analysis of architectural qualities, models of representation of architectural templates and styles, their formalization, validation and testing and finally the engineering approach in

which these consistent and autonomous elements can be tackled.

### Kidney Transplant Management The Stationery Office

As the expense of treating a growing number of end-stage kidney disease patients increases, greater attention has been paid to prevention and early treatment. The study of renal disease, however, suffers due to the complex nature of renal anatomy and physiology and the plethora of different cell types found in the kidney. In *Kidney Research: Experimental Protocols*, top experts in the field seek to aid researchers by providing a number of specialized techniques developed to examine this intricate system. Through both well-established and novel methods, this volume explores the preparation and culture of the main cell types used to study renal disease mechanisms, the common animal

models used to mimic the various forms of human renal disease, and specific applications and techniques used in vivo and in vitro. Written in the highly successful *Methods in Molecular Biology*™ series format, the chapters contain step-by-step, readily reproducible laboratory protocols, lists of the necessary materials and reagents, and tips on troubleshooting and avoiding known pitfalls. Essential and cutting-edge, *Kidney Research: Experimental Protocols* delivers invaluable guidance to new and experienced laboratory researchers delving into the sophisticated study of the kidney.

In April 2013, the International Network on Innovative Apprenticeship (INAP) hosted its fifth international conference in Johannesburg, South Africa, in co-operation with the International Labor Organization (ILO), bringing together researchers, policy makers, and practitioners from 34 nations. The title of the conference - "Apprenticeship in a Globalized World: Premises, Promises and Pitfalls" - points out the need for apprenticeship to deliver on its promise of workplace skills and for it to develop and change as world economies develop. An international exchange of ideas among researchers from all over the world is necessary to

identify cases of good practice and facilitate the transfer of knowledge and innovation, also within the frame of informal apprenticeships. This book, a summary of the papers presented and discussed at the Johannesburg conference, is split up equally into five key topics: Introducing Apprenticeship: Backgrounds, Changes, and Difficulties \* Enabling Learning Opportunities in Workplaces and Informal Contexts \* Competence Assessment and Development \* Managing Transitions from VET into the World of Work \* Curriculum Design, Apprenticeships, and National Qualification Frameworks.
