Learning and Leading with Technology Humana Rising young comedian Moshe Kasher is lucky to be alive. He started using drugs when he was just 12. At that point, he had already been in psychoanalysis for 8 years. By the time he was 15, he had been in and out of several mental institutions, drifting from therapy to rehab to arrest to...you get the picture. But KASHER IN THE RYE is not an "eye opener" to the horrors of addiction. It's a hilarious memoir about the absurdity of it all. When he was a young boy, Kasher's

mother took him on a vacation to the West Coast. Well it was more like an abduction. Only not officially. She stole them away from their father and they moved to Oakland , California. That's where the real fun begins, in the war zone of Oakland Public Schools. He was more than just out of control-his mother walked him around on a leash, which he chewed through and ran away. Those early years read like part Augusten Burroughs, part David Sedaris, with a touch of Jim Carrol...but a lot more Jewish. In fact, Kasher later spends time in a Brooklyn Hasidic community. Then came addiction... Brutally honest and laugh-out-loud funny, Kasher's first literary endeavor finds humor in even the most horrifying situations.

Experts from across all industrial-organizational (IO) psychology describe how increasingly rapid technological change has affected the field. In each chapter, authors describe how this has altered the meaning of IO research within a particular subdomain and what steps must be taken to avoid IO research from becoming obsolete. This Handbook presents a forward-looking review of IO psychology's understanding of both workplace technology and how technology is used in IO research methods. Using interdisciplinary perspectives to further this understanding and serving as a focal text from which this research will grow, it tackles three main questions facing the field. First, how has technology affected IO psychological theory and practice to date? Second, given

the current trends in both research and practice, could IO psychological theories be rendered obsolete? Third, what are the highest priorities for both research and practice to ensure IO psychology remains appropriately engaged with technology moving forward?

"Teleneurology" refers to the use of telecommunications techniques such as the telephone, Internet, email, and videoconferencing to improve the delivery of neurology services. Containing 15 contributions from international clinicians, this volume provides an introduction to telemedicine as it is practiced in neurology today. It is divided into three sections: techniques, applications, and practical issues. The scope and importance of International Commercial Arbitration (ICA) has expanded exponentially in the last few decades and has become the natural and logical method to resolve international business and economic disputes. This collective work captures the development of ICA from different perspectives and uniquely brings together the ideas, suggestions and perspectives of in-house counsel as the most important users of ICA, along with outside counsel, arbitrators themselves, and major arbitration organizations who all help provide the service. Most, if not all, of the contributing authors have served as counsel or arbitrator in arbitrations and have further contributed, through their writings, teachings or activities in arbitral and other institutions, to the

evolution of ICA covered by this collective work.

Accordingly, International Commercial Arbitration Practice: 21st Century Perspectives is an indispensable tool for the reader – practitioner, arbitrator, academic, magistrate or student – not only to obtain useful general information on ICA practice today but to gain insightful views as to the influence of this institution in the settlement of international commercial disputes in specific economic areas, industries and commercial activities. International Commercial Arbitration Practice: 21st Century Perspectives brings the process alive and provides the reader with a useful practice guide whether he or she represents a client participating in an international commercial arbitration, is in-house counsel for a company considering arbitration as a possible method of dispute resolution, or is an arbitrator with cases at hand. The book is organized by Parts which contain thematically related chapters. Part I deals with an overview of key elements in ICA practice and includes chapters on how arbitration is conducted under different

legal systems such as common law, civil law, and shari'a law, as well as a chapter on cultural issues in international arbitration. Part II contains geographical regional overviews covering most regions of the world (Western Europe, Russia/NIS countries, Asia (particularly China & Hong Kong and the Indian Subcontinent), Middle East & North Africa, Latin America, the U.S., Canada, and Australia & New Zealand. Part III includes individual industry sector views of how ICA is conducted in individual industry and business sectors such as oil & gas, LNG, mining, construction, telecommunications, satellite communications, intellectual property, sports, banking & finance, insurance & reinsurance, securities, shipping & maritime, corporate shareholder and bankruptcy settings. These chapters are highly instructive because many of them were written by current or former in-house counsel in these industries or, in some cases, by outside counsel who focus on these industries. Part IV of the book describes recent trends at several major global commercial arbitration institutions such

as the ICC, ICDR, LCIA, CPR and WIPO. Part V deals with questions of how technology has been changing ICA practice in recent years, including chapters relating to the use of technology by some major arbitral institutions, videoconferencing in ICA, and online arbitration of internet domain name and e-commerce cases.
