The book is incremental and structured in its approach. It starts by clearly describing the basics of PBX systems and of Asterisk itself, on which Trixbox is based. Then the book explains how TrixBox links to, and controls Asterisk. Once the core concepts are understood, the book carefully takes you through each stage of setting up and managing your VoIP system with an abundance of screenshots for easy implementation. Because the book covers the concepts and practices of both telephony and Asterisk, it is suitable for both professional and home users with no prior telecom experience. It's ideal for any user wishing to set up a telephony system for individual or small business usage. No previous knowledge of Trixbox or networking is required, although some basic knowledge of PBX and Linux would be an advantage.

Over the past 20 years, software architectures have significantly contributed to the development of complex and distributed systems. Nowadays, it is recognized that one of the critical problems in the design and development of any complex software system is its architecture, i.e. the organization of its architectural elements. Software Architecture presents the software architecture paradigms based on objects, components, services and models, as well as the various architectural techniques and methods, the analysis of architectural qualities, models of representation of architectural templates and styles, their formalization, validation and testing and finally the engineering approach in which these consistent and autonomous elements can be tackled.

To define productivity at the workplace in simple words, it is about how efficiently an organization's employees achieve their company's goals and objectives and produce best goods or services to meet their customers' demands and expectations. Maintaining great levels of productivity at the workplace can help the companies in reducing expenditures, increase the satisfaction level of customers and other stakeholders, go for expansion plans, and stay ahead of the competitors in the market. A decline in workplace productivity can have adverse effects on a company's overall performance and profitability. Thus, employers and employees together can comprehend the reasons behind the low workplace productivity, work on them at professional as well as personal levels to bring the work performance back on track and take it to new heights. An employer can train the employees on work potentials, reorganize and modernize business processes, and nurture higher optimism among the company workforce. In the end, an employee is a kind of an investment for the company, and the investment would only be worthwhile if it delivers the returns on the right time for the company. Only then it would be a win-win situation for both, employees and employers.
