CA211.1: Popper on natural selection's testability

Response: Popper's statement of nonfalsifiability was pretty mild, not as extensive as it is often taken. He applied it only to natural selection, not evolution as a whole, and he allowed that some testing of natural selection was possible, just not a significant amount. Moreover, he said that natural selection is a useful theory.

Popper Selections Karl

The Logic of Scientific Discovery by Karl Popper is an analysis of scientific thinking through his particular view of epistemology.

Popper is a well-known philosopher of science. In this work, he investigates where scientific findings fit into philosophy through examining what differentiates true knowledge from false knowledge.
