MotorBooks International In Ferdinand Porsche - Genesis of Genius, author Karl Ludvigsen reveals a dynamic young innovator who helped to chart the course of the automobile through the first decades of the twentieth century. As early as 1900, at the age of 25, Ferdinand Porsche pioneered hybrid technology to power his automobile designs. Once gasoline gained dominance as the power-source of choice, Porsche became relentless in his goal to design the fastest and most durable automobiles in Europe. Ferdinand Porsche - Genesis of Genius explores in depth the unique combination of ambition, determination and genius that were the genesis of an automotive dynasty which has continued to thrive and expand for over a century.

Porsche made history when it brought turbocharging to the racing world in the form of the 917. When strict regulations regarding engine	took away the option of bigger engines, manufacturers turned to forced induction. The resulting 930 Turbo appeared in the spring of 1975 in Europe. Acceleration from 0 to 100 kilometers per hour took a scant 5.5 seconds, and its top speed was 155 miles per hour. The Turbo's distinctive rear wing let the world know that this was something very special. It was nothing less than the rebirth of the high-performance automobile.
