Sixteen years into the AIDS epidemic, our understandings of the virus, its transmission, modes of controlling blood banks and testing are relatively well established. In the last decade, we have also experienced an astonishing amount of new social science research enabling us to better understand concepts like risk taking, gender-related prevention, women's health, and youth psychology, just to mention a few. In almost every country in the world, efforts have been made to respond affirmatively to the challenge of stopping the further spread of HIV/AIDS. Educational interventions have ranged from re-inventing the wheel to innovative programs, using a variety of health education methods. The field of evaluation research now provides us a better understanding of what works and what does not work. Issues relating to human rights, the relationship between the affected and the health/medical professional communities, and to the inequality in the delivery of preventive and educational services are becoming an important part of the debates and discussions in the concerned societies.

A Catholic Woman's Journey to Planned Parenthood and Back Elsevier Health Sciences

A sweeping chronicle of women's battles for reproductive freedom throughout American history, *Pregnancy and Power* explores the many forces—social, racial, economic, and political—that have shaped women's reproductive lives in the United States. Leading historian Rickie Solinger argues that a woman's control over her body involves much more than the right to choose an abortion. Reproductive politics were at play when slaveholders devised breeding schemes, when the U.S. government took Indian children from their families in the nineteenth century, and when doctors pressed Latina women to be sterilized in the 1970s. Tracing the diverse plot lines of women's reproductive lives throughout American history, Solinger redefines the idea of reproductive freedom, putting race and class at the center of the effort to control sex and pregnancy in America over time. Solinger asks which women have how many children under what circumstances, and shows how reproductive experiences have been encouraged or coerced, rewarded or punished, honored or exploited over the last 250 years. Viewed in this way, the debate over reproductive rights raises questions about access to sex education and prenatal care, about housing laws, about access to citizenship, and about which women lose children

to adoption and foster care. *Pregnancy and Power* shows that a complete understanding of reproductive politics must take into account the many players shaping public policy—lawmakers, educators, employers, clergy, physicians—as well as the consequences for women who obey and resist these policies. Tracing the diverse plotlines of women's reproductive lives throughout American history, Solinger redefines the idea of reproductive freedom, putting race and class at the center of the struggle to control sex and pregnancy in America.

Modern Families brings together research on parenting and child development in new family forms including lesbian mother families, gay father families, families headed by single mothers by choice and families created by assisted reproductive technologies such as in vitro fertilisation (IVF), egg donation, sperm donation, embryo donation and surrogacy. This research is examined in the context of the issues and concerns that have been raised regarding these families. The findings not only contest popular myths and assumptions about the social and psychological consequences for children of being raised in new family forms but also challenge well-established theories of child development that are founded upon the supremacy of the traditional family. It is argued that the quality of family relationships and the wider social environment are more influential in children's psychological development than are the number, gender, sexual orientation, or biological relatedness of their parents or the method of their conception.

At age eight, Ramona Treviño climbed to the top of a roof and begged God to let her know he was real. After receiving a sign, she made a pact with herself to follow him always. But family difficulties and growing pains made it hard for her to continue on that path. Pregnant at 16, she dropped out of high school and entered an abusive marriage, which ended in divorce. Wanting to make a difference and to help girls in similar tough situations, she accepted a job as the manager of a Planned Parenthood facility in Sherman, Texas. Over time, however, Ramona began to grapple with whether she was doing women more harm than good, setting her on a path to seek the truth, no matter where it might lead. Realizing she could no longer refer women for abortions or provide them with false assurances of risk-free sex, Ramona took a leap of faith and left the financial security of her job. Her ultimate conversion involved a full return to the Catholic faith of her childhood and a new role as a pro-life advocate and speaker. This compelling story tells of Ramona's struggle to reconcile her identity as a daughter of God with a world that sends conflicting messages concerning the source of our dignity and happiness. It is the honest and heartfelt account of a woman who, with the help of grace, strove to overcome the wounds of her own past while becoming an agent of healing for others.
