Concepts of Mathematics and Physics Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Semester 1: Mathematics Numbers surround us. Just try to make it through a day without using any. It's impossible: telephone numbers, calendars, volume settings, shoe sizes, speed limits, weights, street numbers, microwave timers, TV channels, and the list goes on and on. The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them. It's amazing how ten simple digits can be used in an endless number of ways to benefit man. The development of these ten digits and their many uses is the fascinating story in Exploring the World of Mathematics. Semester 2: Physics Physics is a branch of science that many people consider to be too complicated to understand. John Hudson Tiner puts this myth to rest as he explains the fascinating world of physics in a way that students can comprehend. Did you know that a feather and a lump of lead will fall at the same rate in a vacuum? Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances. Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space. Learn about the effects of inertia firsthand during fun and informative experiments. Exploring the World of Physics is a great tool for students who want to have a deeper understanding of the important and interesting ways that physics affects our lives.

You don't have to be a rocket scientist to understand matter and energy with our Physical Science 3-book BUNDLE. Students discover what matter is with Properties of Matter. Identify atoms, particles and molecules before exploring the three states of matter. Experiment with photosynthesis, an important chemical change. Then, explore the invisible world of Atoms, Molecules and Elements. See how the atomic model is made up of electrons, protons and neutrons. Get comfortable with the periodic table by recognizing each element as part of a group. Finally, unlock the mysteries of Energy. Dissect mechanical energy by identifying the different points on a roller coaster as using kinetic or potential energy. Measure the speed of sound in a group experiment. Each concept is paired with hands-on activities and experiments. Aligned to the Next Generation Science Standards and written to Bloom's Taxonomy and STEAM initiatives, additional crossword, word search, comprehension quiz and answer key are also included.

This is the chapter slice "Other Forms of Potential Energy" from the full lesson plan "Energy". Unlock the mysteries of energy! Energy is more than "the ability to do work"; we present these concepts in a way that makes them more accessible to students and easier to understand. The best way to understand energy is to first look at all the different kinds of energy including: What Is Energy, Mechanical Energy, Thermal, Sound Energy and Waves, as well as Light Energy. Our resource provides ready-to-use information and activities for remedial students using simplified language and vocabulary. We also explore other forms of potential energy, as well as how energy moves and changes. Written to grade and comprised of reading passages, student activities and color mini posters, our resource can be used effectively for your whole-class. All of our content meets the Common Core State Standards and are written to Bloom's Taxonomy and STEM initiatives.
