Practical Boat Mechanics: Commonsense Ways to Prevent, Diagnose, and Repair Engines and Mechanical Problems Taylor Trade Publishing

Boat owners, perhaps more so than other motoring enthusiasts, want to spend their time playing, not maintaining, their toys. Unfortunately, due to their higher exposure to damaging elements, their longer periods of non-use, and the remote locations to which they transport their users, it could be argued that boats also require more care than cars or motorcycles. This guide breaks down by system the routine maintenance procedures every boat owner should know, presenting in more digestible chunks the upkeep of any modern boat, whether it's 16 or 60 feet, inboard or outboard, open-hulled or cabin-equipped. Much of the information included is even applicable to sailboats, as well as runabouts and cabin cruisers.

The second in a series of highly practical, hands on, step-by-step photographic manuals, *Replacing Your Boat's Electrical System* fills a gap in the market for the DIY boat builder and repairer. It is a subject covered only in piecemeal fashion by the yachting press, which, like general boat repair manuals, can't go into the level of detail Micke Westin does. This is a visual, hand-holding guide, dwelling on the details as it explains each procedure rather than focussing on the theory (which is relegated to an appendix, for those who wish to go further).

Boat Repair Made Easy A&C Black

Excerpt from *Power Boat Hand Book* Our engine, since starting, has been well

throttled down, as there is really no use having it race away, wearing itself out for

nothing, besides the shake and jar on the boat. Before putting in the clutch we speed

up just a little; just enough not to stall the motor and then press in the clutch. Don't

jam it in. Just press it up to the point where a little more effort will make it 'take hold

and lock. We carefully steer out between the other boats and head for our black buoy,

just in time to meet another boat coming in. We get one whistle from this incoming

boat which we answer with one whistle and turn our boat to the right, enough to allow

a safe distance between us and the incoming boat which has also turned somewhat to

the right to give us part of the channel. We pass the black buoy to starboard (our

right side; as buoys have no port nor starboard, we must learn that the term pass to

starboard, or pass to port, refers to the boat's side and not the buoy's) and head full

speed for the lighthouse some couple of _miles away. Now if we only had a chart

aboard we could learn just how near that light we could go, whether the bottom was

soft or rocky, whether the light was a white light or a red light. The paint on a

lighthouse of course does not tell us the color of the light, but nevertheless if we had

the Government book aboard called the Light List we would find this lighthouse is

described with many other lights for this district. So on our return we had better

make out a list of things we really should have. We hold well off the light not knowing

what else to do, and keep on until we come to another black buoy. Should this also

be passed on the starboard? Now this is when and where we need a chart. Our good

friend at the club is some miles away, but if we had a chart of the locality we would

be independent. We therefore decide to turn back, receiving two sharp blasts from a

large steamer which turned somewhat up to the left and passed close to us on our

right hand or starboard side. We thereby learn that it is necessary for us to know

what these whistles mean, and when and how they are to be used and given. Before

we reach Our club anchorage, we cut down our speed about half, as it is bad form to

go rushing through a fleet of boats or narrow channels full speed. As we near our

mooring we give it a wide berth as we pass, then turn about, head our boat up against

the tide and straight for our pickup buoy. Throwing out the clutch and slowly coming

up in reach Of the buoy we pick up our line (with the boat hook, which we keep well

forward and ready for this purpose) and make the line fast to the deck cleat. About
