The purpose of this book is to describe the theory of Digital Power Electronics and its applications. The authors apply digital control theory to power electronics in a manner thoroughly different from the traditional, analog control scheme. In order to apply digital control theory to power electronics, the authors define a number of new parameters, including the energy factor, pumping energy, stored energy, time constant, and damping time constant. These parameters differ from traditional parameters such as the power factor, power transfer efficiency, ripple factor, and total harmonic distortion. These new parameters result in the definition of new mathematical modeling: • A zero-order-hold

(ZOH) is used to simulate all AC/DC rectifiers.

- A first-order-hold (FOH) is used to simulate all DC/AC inverters.
 - A second-order-hold (SOH) is used to simulate all DC/DC converters.
 - A first-order-hold (FOH) is used to simulate all AC/AC (AC/DC/AC) converters.
- * Presents most up-to-date methods of analysis and control algorithms for developing power electronic converters and power switching circuits * Provides an invaluable reference for engineers designing power converters, commercial power supplies, control systems for motor drives, active filters, etc. * Presents methods of analysis not available in other books.

The Power Electronics Handbook Butterworth-Heinemann

Building on solid state device and electromagnetic contributions to the series, this text book introduces modern power electronics, that is the application of semiconductor devices to the control and conversion of electrical power. The increased availability of solid state power switches has created a very rapid expansion in applications, from the relatively low power control of domestic equipment, to high power control of industrial processes and very high power control along transmission lines. This text provides a comprehensive introduction to the entire range of devices and examines their applications, assuming only the minimum mathematical and electronic background. It covers a full year's course in power electronics. Numerous exercises, worked examples and self assessments are included to facilitate self study and distance learning.

It's not Halloween but horror is hitting **The Bounding Storm ...** and Rowan Gray couldn't be more excited. That's right, the Indie Horror Movies are being held on the ship and that means the entire guest list is made up of members of the B-movie industry. As a horror buff, Rowan is having trouble containing her enthusiasm. She can't wait to meet some of her favorites, although the experience might not be all she dreamed about. From a security perspective, the awards don't offer up much trouble for Quinn Davenport - other than the expensive camera serving as the grand prize. He's more interested in keeping Rowan out of trouble than anything else. When Rowan's special gift rears its ugly head and one of the biggest actresses falls under a death omen, Quinn and Rowan find themselves in the unenviable position of watching her without tipping their hands. When she goes missing, they expect the worst ... and that's long before death officially comes calling. Rowan may love horror movies but she doesn't enjoy fiction intruding on real life. Something big is going on - and it seems all the guests have a secret. Rowan needs to sort through the lies, discover the truth, and find a way to save the day. That's if she herself survives, of course, which is no guarantee on a ship full of potential killers. A storm is coming, and a killer is in their midst. It's anybody's guess who will make it to the final credits.
