McGraw Hill Professional "Machines and Mechanisms: Applied Kinematic Analysis," Second Edition, applies kinematic theories, both graphical and analytical, to real-world machines. It is intended to bridge the gap between a theoretical study of kinematics and the application to practical mechanisms. This text meets the need for an introduction to kinematic analysis that uses "actual machines and mechanisms." The objective

of this book (consistent with the philosophy of engineering and technology programs) is to provide the techniques necessary to study the motion of machines while emphasizing the application of kinematic theories to real-world machines. Distinctive features of this book include: Case studies at the end of every chapter illustrate a mechanism used on industrial equipment and help students to see the practical application of the material they are studying. one year, Giorgia Lupi, an Italian living in New York, and Stefanie Posavec, an American in London, mapped the particulars of their daily lives as a series of hand-drawn postcards they exchanged via mail weekly—small portraits as full of emotion as they are data, both mundane and magical. Dear Data reproduces in pinpoint detail the full year's set of cards, front and back, providing a remarkable portrait of two artists connected by their attention to the details of their lives—including complaints, distractions, phone addictions, physical contact, and desires.

These details illuminate the lives of two remarkable young women and also inspire us to map our own lives, including specific suggestions on what data to draw and how.
