A collection of classic, yet shockingly contemporary, short stories set in the vibrant world of mid-century Bombay, from one of India's greatest writers. Arriving in 1930s Bombay, Saadat Hasan Manto discovered a city like no other. A metropolis for all, and an exhilarating hub of license and liberty, bursting with both creative energy and helpless despondency. A journalist, screenwriter, and editor, Manto is best known as a master of the short story, and Bombay was his lifelong muse. Vividly bringing to life the city's seedy underbelly—the prostitutes, pimps, and gangsters that filled its streets—as well as the aspiring writers and actors who arrived looking for fame, here are all of Manto's Bombay-based stories, together in English for the very first time. By turns humorous and fantastical, Manto's tales are the provocative and unflinching lives of those forgotten by humanity.

Power System Operation & Control: John Wiley & Sons

Deregulation is a fairly new paradigm in the electric power industry. And just as in the case of other industries where it has been introduced, the goal of deregulation is to enhance competition and bring consumers new choices and economic benefits. The process has, obviously, necessitated reformulation of established models of power system operation and control activities. Similarly, issues such as system reliability, control, security and power quality in this new environment have come in for scrutiny and debate. In this book, we attempt to present a comprehensive overview of the deregulation process that has developed till now, focussing on the operation aspects. As of now, restructured electricity markets have been established in various degrees and forms in many countries. This book comes at a time when the deregulation process is poised to undergo further rapid advancements. It is envisaged that the reader will benefit by way of an enhanced understanding of power system operations in the conventional vertically integrated environment vis-a-vis the deregulated environment. The book is aimed at a wide range of audience- electric utility personnel involved in scheduling, dispatch, grid operations and related activities, personnel involved in energy trading businesses and electricity markets, institutions involved in energy sector financing. Power engineers, energy economists, researchers in utilities and universities should find the treatment of mathematical models as well as emphasis on recent research work helpful.
