Author Ned Mohan has been a leader in EES education and research for decades. His three-book series on Power Electronics focuses on three essential topics in the power sequence based on applications

relevant to this age of sustainable energy such as wind turbines and hybrid electric vehicles. The three topics include power electronics, power systems and electric machines. Key features in the first Edition build on Mohan's successful MNPERE texts; his systems approach which puts dry technical detail in the context of applications; and substantial pedagogical support including PPT's, video clips, animations, clicker questions and a lab manual. It follows a top-down systems-level approach to power electronics to highlight interrelationships between these sub-fields. It's intended to cover fundamental and practical design. This book also follows a building-block approach to power electronics that allows an in-depth discussion of several important topics that are usually left. Topics are carefully sequenced to maintain continuity and interest.

A collection of classic, yet shockingly contemporary, short stories set in the vibrant world of mid-century Bombay, from one of India's greatest writers. Arriving in 1930s Bombay, Saadat Hasan Manto discovered a city like no other. A metropolis for all, and an exhilarating hub of license and liberty, bursting with both creative energy and helpless despondency. A journalist, screenwriter, and editor, Manto is best known as a master of the short story, and Bombay was his lifelong muse. Vividly bringing to life the city's seedy underbelly—the prostitutes, pimps, and gangsters that filled its streets—as well as the aspiring writers and actors who arrived looking for fame, here are all of Manto's Bombay-based stories, together in English for the very first time. By turns humorous and fantastical, Manto's tales are the provocative and unflinching lives of those forgotten by humanity.
