Every new, or relatively new, Mac comes loaded with powerful "digital lifestyle" applications, collectively known as iLife.

Problem is, Apple provides little if any documentation. Sure, these iApps are easy-to-use, but each of them also has tons of undocumented features and shortcuts.

We'll visually explain each app's basic features, then go beyond the basics to show hidden features and time-saving shortcuts. In addition, each section that focuses on the creative iApps will include off-the-wall and entertaining, yet useful, projects that'll show readers how to have fun with the easy-but-powerful software that came with their Macs.

Finally, we'll take a look inside the Utilities folder to explore all its geeky goodness, and teach the reader which of these apps can help them, and which are better left alone and which one is the gateway to a host of old-school games that we bet you didn't even know were there. Apps covered in this one-of-a-kind book include:

McGraw Hill Professional Draws on more than forty interviews with Steve Jobs, as well as interviews with family members, friends, competitors, and colleagues to offer a look at the co-founder and leading creative force behind the Apple computer company. *Macworld* John Wiley & Sons

The Screen Design Manual provides designers of interactive media with a practical working guide for preparing and presenting information that is suitable for both their target groups and the media they are using. It highlights background information and relationships, clarifying them with examples, and encourages the further development of the language of digital media. In addition to the basics of perception and learning psychology, ergonomics, communication theory, imagery research, and aesthetics, the book also considers design navigation and orientation elements. Guidelines and checklists, along with the comprehensive design of the book, support the transfer of information into practice. Frank Thissen teaches multimedia didactics and information design at the University of Applied Sciences in Stuttgart. For over 10 years he has been developing computer based training. He has worked for international companies such as Siemens AG and SAP AG. His research

The future is yours to create. Could you be the Leonardo da Vinci of our times? Most ideas are incremental, quickly copied and suffocated by conventions. "Future back" thinking starts with stretching possibilities then makes them a reality "now forward". The best ideas emerge

what everyone has seen, and thinking like nobody else. Newness occurs in the margins not the mainstream. Solutions emerge through powerful fusions of the best ideas into practical, useful concepts. Creative people rise up. Visionaries, border crossers and

game changers. Engage your right brain, open your eyes, think more holistically... intuition rules. From Apple to Blackberry, GE to Google, innovative companies stand out from the crowd not so much for their exceptional products, despite what one might assume, but for the way they

challenge conventions, redefine markets, and change consumer expectations . Apple didn't just create the iPod; it envisioned the future of music and then made a product to service that future. And the same holds true for every highly innovative company. In Creative Genius, Peter Fisk presents ten

tracks for innovation and provides business blueprints for making that innovation happen. Creative Genius is inspired by the imagination and perspective of Leonardo da Vinci, in order to drive creativity, design and innovation in more radical and powerful ways. It includes

practical tools ranging from scenario planning and context reframing to accelerated innovation and market entry, plus 50 tracks, 25 tools, and 50 inspiring case studies. Creative Genius is "the best and last" in the Genius series by bestselling author Peter Fisk. Others include Business

Genius,
Marketing
Genius and
Customer
Genius.
