In *Autonorama: The Illusory Promise of High-Tech Driving*, historian Peter Norton argues that driverless cars cannot be the safe, sustainable, and inclusive "mobility solutions" that tech companies and automakers are promising us. The salesmanship behind the "driverless future" is distracting us from better ways to get around that we can implement now. Unlike autonomous vehicles, these alternatives are inexpensive, safe, sustainable, and inclusive. Norton takes the reader on an engaging ride--from the GM Futurama exhibit to "smart" highways and vehicles--to show how we are once again being sold car dependency in the guise of mobility. *Autonorama* is hopeful, advocating for wise, proven, humane mobility that we can invest in now, without waiting for technology that is forever just out of reach.

Practical ideas to provide affordable housing to more Americans  
Much ink has been spilled in recent years talking about political divides and inequality in the United States. But these discussions too often miss one of the most important factors in the divisions among Americans: the fundamentally unequal nature of the nation ' s housing systems. Financially well-off Americans can afford comfortable, stable homes in desirable communities. Millions of other Americans cannot. And this divide deepens other inequalities. Increasingly, important life outcomes—performance in school, employment, even life expectancy—are determined by where people live and the quality of homes they live in. Unequal housing systems didn ' t just emerge from natural economic and social forces. Public policies enacted by federal, state, and local governments helped create and reinforce the bad housing outcomes endured by too many people. Taxes, zoning, institutional discrimination, and the location and quality of schools, roads, public transit, and other public services are among the policies that created inequalities in the nation ' s housing patterns. *Fixer-Upper* is the first book assessing how the broad set of local, state, and national housing policies affect people and communities. It does more than describe how yesterday ' s policies led to today ' s problems. It proposes practical policy changes that can make stable, decent-quality housing more available and affordable for all Americans in all communities. Fixing

systemic problems that arose over decades won't be easy, in large part because millions of middle-class Americans benefit from the current system and feel threatened by potential changes. But Fixer-Upper suggests ideas for building political coalitions among diverse groups that share common interests in putting better housing within reach for more Americans, building a more equitable and healthy country.

The face of the pedestrian safety crisis looks a lot like Ignacio Duarte-Rodriguez. The 77-year old grandfather was struck in a hit-and-run crash while trying to cross a high-speed, six-lane road without crosswalks near his son's home in Phoenix, Arizona. He was one of the more than 6,000 people killed while walking in America in 2018. In the last ten years, there

has been a 50 percent increase in pedestrian deaths. The tragedy of traffic violence has barely registered with the media and wider culture.

Disproportionately the victims are like Duarte-Rodriguez—immigrants, the poor, and people of color. They have largely been blamed and forgotten. In Right of Way, journalist Angie Schmitt shows us that deaths like Duarte-Rodriguez's are not unavoidable "accidents." They don't happen because of jaywalking or distracted walking. They are predictable, occurring in stark geographic patterns that tell a story about systemic inequality. These deaths are the forgotten faces of an increasingly urgent public-health crisis that we have the tools, but not the will, to solve. Schmitt examines the possible causes of the increase in pedestrian deaths as well as programs and movements that are beginning to respond to the epidemic. Her investigation unveils why pedestrians are dying—and she demands action. Right of Way is a call to reframe the problem, acknowledge the role of racism and classism in the public response to these deaths, and energize advocacy around road safety. Ultimately, Schmitt argues that we need improvements in infrastructure and changes to policy to save lives. Right of Way unveils a crisis that is rooted in both inequality and the undeterred reign of the automobile in our cities. It challenges us to imagine and demand safer and more equitable cities, where no one is expendable.

Since the 5th edition was published, the field of IH has changed with personnel often working for multinational firms, self-employed, at small consulting firms. Their environment has changed and expanded, and thus also the types of information and resources required have changed. The traditional areas of interest to occupational health and safety professionals include anticipation, recognition, evaluation and control of potential hazards. In addition to these, the 6th edition provides information and reliable resources to prepare for natural disasters, exposures to biological agents and potential acts of terrorism.

A 2002 study from Comprehensive Issues in Pediatric Nursing found that 94 percent of students with Asperger Syndrome face torment from their peers. Indeed, some of their behaviors and characteristics that others see as "different" make many of these children easy targets for frequent and severe bullying. This book takes a frank look at the different types of bullying and what adults must do to curb bullying, helping prevent the often lifelong effects of this behavior on its victims. Practical strategies and solutions at the school, class and individual level are presented.

Louise Blanchard Bethune, the subject of this biography, was America's first female professional architect. She belonged to the influential group of pioneer architects--Daniel Burnham, John Root and Louis Sullivan--who supported her in becoming a fellow of the American Institute of Architects. In the booming industrial city of Buffalo, she preceded Frank Lloyd Wright and Alfred Kahn in factory design and was the key designer of the modern urban public school building, developing standards still used today. During her career (1881-1905) Bethune was consistently one of the most successful architects practicing in Buffalo and the driving force behind New York State's professional organizations for architects. Beyond setting standards for public schools, she was the go-to architect for factories, warehouses, police stations, a Nikola Tesla power transfer station, and the largest luxury hotel of the early 1900s. Bethune moved from a small town on the Erie Canal--the economic and technological marvel of the antebellum period--to a rapidly industrializing major American city, following the urban migration of many Americans. Unlike many women of her day she seized the promise of the growing nation to pursue life, liberty, and happiness in an occupation of her choice and succeeded.

**Family Policy and the American Safety Net** shows how families adapt to economic and demographic change. Government programs provide a safety net against the new risks of modern life. Family policy includes any public program that helps families perform their four universal obligations of caregiving, income provision, shelter, and transmission of citizenship. In America, this means that child care, health care, Social Security, unemployment insurance, housing, the quality of neighborhood schools, and anti-discrimination and immigration measures are all key elements of a de facto family policy. Yet many students and citizens are unaware of the history and importance of these programs. This book argues that family policy is as important as economic and defense policy to the future of the nation, a message that is relevant to students in the social sciences, social policy, and social work as well as to the public at large. .
