With just a couple of lines of PHP in each page we have turned our static pages in a dynamic web site. If we now wish to do any of the operations listed above, say move to a different style sheet, add an image to the header section, change the contact e-mail, we can now do it in a “central” location (the header and footer pages),

once, and this will reflect on all the pages of our website.

"Practical PHP and MySQL reflects Jono's commitment to the spirit of making open source subjects accessible to everyone. The book carefully walks you through the code for eight useful, dynamic Web applications. Projects are presented in a playful way, like the forum project that touts horror movies that make you 'hide behind the couch.'"

databases - A Simplified Approach, has given me an excellent understanding of what goes on behind the scenes of a database driven website. What I like about this book is that I did not need to purchase any further software

You have learned the basics of PHP and MySQL, so now we will create a full database-driven web site, using a product catalog as an example. Most e-commerce web sites incorporate a catalog to display products and services. Some web sites use catalogs to display items that cannot be purchased over the Internet, such as tourist attractions or houses.
