We know a lot about innovation in education--when it occurs, what forms it takes, or what steps it involves. But we don't know why it fails or succeeds. Arthur Levine's goal in writing this book was to understand how change can be accomplished successfully. His focus is on what happens after a change has been adopted. Levine first offers a theory about change in organizations, based on the personality of the organization. He then examines his theory of change in a detailed study of fourteen structurally similar innovations in the experimental colleges at the State University of New York at Buffalo. He concludes with a review of other studies of universities as organizations in general, integrating his theory with other research on innovation in organizations.
