**Incomplete/Codominance Problem In snapdragons : The ...**

Incomplete dominance is when there is a blending of the two alleles that results in a third phenotype that doesn't look like either of the parents. The classic example is when a white flower and red flower are crossed. With incomplete dominance, all their offspring would be solid pink flowers, a completely new phenotype.

**Incomplete And Codominance Practice Problems Answers**

Incomplete dominance refers to when one allele for a certain trait is not entirely dominant over its counterpart (the other allele). The offspring end up with a combined phenotype. The traits of each parent are neither dominant or recessive and a third phenotype results.
