In the current volume, the selected studies have been grouped into three thematic sections, presenting readers with a set of distinct but related research on meaningful issues for a modern learning experience. The first three chapters present professional and teacher development perspectives and collectively shed light on how to develop, maintain, and improve pre and in-service teacher training and professional development. The second set of four chapters provide research findings that describe the results of direct applications of modern learning elements through course assignments and teaching approaches. The final five chapters focus on critical thinking and range in their focus from classroom-based studies to full-scale curriculum reform. The collection of chapters presented in this volume represents the eclectic nature of modern learning experiences and demonstrate its applicability across educational contexts and disciplines. The chapters resonate with other educational researchers in search of novel ways of creating, facilitating, and investigating modern learning experiences.

This Element examines the concept of reflective practice in language teaching. It includes a brief description of what reflective practice is and how it is operationalized by two of its main protagonists, John Dewey and Donald Schön, as well as some of the limitations of their conceptions. This is used as an introduction to how the author further developed their conceptions when operationalizing reflective practice for language teachers through a five-stage framework for reflecting on practice for language teachers. The author then presents an in-depth case study of the reflections of an English as a Foreign

Language (EFL) teacher working in Costa Rica as he moved through the five stages of the framework for reflecting on practice. The author then goes on to outline and discuss how reflective practice may be moved forward and calls attention to the importance of emotions in the process of reflection for language teachers.

Ethics for Nursing and Healthcare Practice Litres

Kath Melia's new book on ethics works in the gap between nursing theory and practice. The chapters tackle the main theories which form the discussion on ethics, and include practical case examples, which bring these theories into the clinical context. These classic and everyday cases challenge the reader to critically reflect on his/her own experiences and outlook.

TRIZ is a brilliant toolkit for nurturing engineering creativity and innovation. This accessible, colourful and practical guide has been developed from problem-solving workshops run by Oxford Creativity, one of the world's top TRIZ training organizations started by Gadd in 1998. Gadd has successfully introduced TRIZ to many major organisations such as Airbus, Sellafield Sites, Saint-Gobain, DCA, Doosan Babcock, Kraft, Qinetiq, Trelleborg, Rolls Royce and BAE Systems, working on diverse major projects including next generation submarines, chocolate packaging, nuclear clean-up, sustainability and cost reduction. Engineering companies are increasingly recognising and acting upon the need to encourage successful, practical and systematic innovation at every stage of the engineering process including product development and design. TRIZ enables greater clarity of thought and taps into the creativity innate in all of us, transforming random, ineffective brainstorming into targeted, audited, creative sessions focussed on the problem at hand and unlocking the engineers' knowledge and genius to identify all the relevant solutions. For good design engineers and technical directors across all industries, as well as students of engineering, entrepreneurship and innovation, TRIZ for Engineers will help unlock and realise the potential of TRIZ. The individual tools are straightforward, the problem-solving process is systematic and repeatable, and the results will speak for themselves. This highly innovative book: Satisfies the need for concise, clearly presented information together with practical advice on TRIZ and problem solving algorithms Employs explanatory techniques, processes and examples that have been used to train thousands of engineers to use TRIZ successfully Contains real, relevant and recent case studies from major blue chip companies Is illustrated throughout with specially commissioned full-colour cartoons that illustrate the various concepts and techniques and bring the theory to life Turns good engineers into great engineers.

As a usability specialist or interaction designer working with the government, or as a government or contractor professional involved in specifying, procuring, or managing system development, you need this book. Editors Elizabeth Buie and Dianne Murray have brought together over 30 experts to outline practical advice to both usability specialists and government technology professionals and managers. Working with internal and external government systems is a unique and difficult task because of the sheer magnitude of the audience for external systems (the entire population of a country, and sometimes more), and because of the need to achieve government transparency while protecting citizens' privacy.. Open government, plain language, accessibility, biometrics, service design, internal vs. external systems, and cross-cultural issues, as well as working with the government, are all covered in this book. Covers both public-facing systems and internal systems run by governments Details usability and user experience approaches specific to government websites, intranets, complex systems, and applications Provides practical material that allows you to take the information and immediately use it to make a difference in your projects

This book presents contemporary theoretical methods in fluid flow and heat transfer, emphasizing principles of investigation and modeling of natural phenomena and engineering processes. It is organized into four parts and 12 chapters presenting classical and modern methods. Following the classical methods in Part 1, Part 2 offers in-depth coverage of analytical conjugate methods in convective heat transfer and peristaltic flow. Part 3 explains recent developments in numerical methods including new approaches for simulation of turbulence by direct solution of Navier-Stokes equations. Part 4 provides a wealth of applications in industrial systems, technology processes, biology, and medicine. More than a hundred examples show the applicability of the methods in such areas as nuclear reactors, aerospace, crystal growth, turbine blades, electronics packaging, optical fiber coating, wire casting, blood flow, urinary problems, and food processing. Intended for practicing engineers and students, the book balances strong formulation of problems with detailed explanations of definitions and terminology. Author comments give attention to special terms like singularity, order of magnitude, flow stability, and nonisothermicity characteristics. More than 400 exercises and questions are offered, many of which divide derivations between you and the author. For these exercises, the author describes the solution method and the results in the text, but you are directed to complete specific portions of the solutions. You then have a choice to accept the results or to further explore the underlying problem. Extensive references are provided for further study.

Reality Transurfing: steps 1-5 John Wiley & Sons

Even though statisticians report that more than 37 million Americans suffer from diagnosable social phobia, common sense suggests that nearly all of us have, at one time or another, had clammy palms and knocking knees because of an intimidating, uncomfortable social situation. The party where you don't know a single soul, the crowded lobby of a movie theatre, the presentation you've been dreading for weeks-any of these have the potential to ruin your week without necessarily sending you to the psychiatrist's couch. The ten simple exercises in this book help you shed your shyness and start socializing with confidence and Élan. 10 Simple Solutions to Shyness examines shyness by symptoms: physical discomfort, anxious thoughts, and bothersome behaviors. Solutions follow, directly addressing all three. You can carry the book in a briefcase or purse for last minute support and extra confidence. Once the ten simple solutions are learned, they will become your constant companions, providing courage, poise, and composure whenever you need them most.

It seems that government wants to invade every part of our lives: our workplace, our religion, even our families. And now our debt! As a small businessman, I am appalled at the spending deficit, year after year. Don't our people in Congress know that even the interest on our national debt is a backbreaking load on our economy? Perhaps we have too many lawyers roaming the Hallowed Halls and too few responsible businessmen. The awful specter of death overwhelmed me. Never again would I hear her bubbly laughter as she jumped into my lap to hug me. Never again would she delight us with her little-girl antics. I begged God to spare her. I confessed every sin I could remember. It was not to be. In His infinite wisdom, God took her home. Oh, Susan. I consider the Bible to be the most practical book ever written. It teaches us how to live in a world that seems to consider honesty and integrity to be a fault. It teaches purity in a world where chastity is pictured as unnatural. It promotes self-sacrificial friendliness to a grasping, self-seeking world. It teaches us to live peaceably, and finally, it can prepare us for eternity.

Mentoring Geography Teachers in the Secondary School supports both new and experienced mentors in developing their knowledge and skills in mentoring in geography education. Within the book, chapter authors critically consider how mentoring has been conceptualised and represented in policy and academic debate, as well as examining how mentoring in geography education has been experienced and perceived in practice. Chapters in the book explore a range of perspectives, experiences and aspects of mentoring geography teachers, including: • Critical engagement with educational policy and practice • Perspectives from beginning geography teachers • Mentoring as a professional development opportunity • The value of engaging with the geography education community in teacher education • How mentoring meetings and conversations can support beginning geography teachers in their growth and development This book is a vital source of support and inspiration for all those involved in developing the next generation of geography teachers. The themes of justice, agency and voice - raised and engaged with implicitly and explicitly throughout this edited collection - are of critical importance to mentors, beginning teachers and geography education more broadly in developing and enacting a progressive vision of mentoring.
