Data is fundamental to the modern world. From economic development, to healthcare, to education and public policy, we rely on numbers to allocate resources and make crucial decisions. But because so much data fails to take into account gender, because it treats men as the default and women as atypical, bias and discrimination are baked into our systems. And women pay tremendous costs for this bias, in time, money, and often with their lives. Celebrated feminist advocate Caroline Criado Perez investigates shocking root cause of gender inequality and research in *Invisible Women*†, diving into women's lives at home, the workplace, the public square, the doctor's office, and more. Built on hundreds of studies in the US, the UK, and around the world, and written with energy, wit, and sparkling intelligence, this is a groundbreaking, unforgettable exposé that will change the way you look at the world.

Interactions in Molecules Edexcel GCSE (9-1) Psychology
' Chalcogen-nitrogen chemistry involves the study of compounds that exhibit a linkage between nitrogen and sulfur, selenium or tellurium atoms. Such studies have both fundamental and practical importance. A Guide to Chalcogen-Nitrogen Chemistry examines the role of chalcogen-nitrogen compounds in areas ranging from solid-state inorganic chemistry to biochemistry. The discussion covers fundamental questions concerning the bonding in electron-rich systems, as well as potential practical applications of polymers and materials with novel magnetic or electrical properties. This book is the only account of this

important topic to appear in the last twenty-five years, and coupled with its extensive literature coverage of very recent developments, this comprehensive guide is essential for anyone working in the field. The treatment is unique in providing a comparison of sulfur, selenium and tellurium systems, with an approach intended to emphasize general concepts that will be helpful to the non-specialist. Each chapter is designed to be self-contained, and there are extensive cross-references between chapters. Contents: Formation of Chalcogen-Nitrogen Bonds Applications of Physical Methods Electronic Structures and Reactivity Patterns Binary Systems Cyclic Chalcogen Imides Metal Complexes Chalcogen-Nitrogen Halides Chalcogen-Nitrogen Oxides Acyclic Organochalcogen-Nitrogen Compounds Five-Membered Carbon-Nitrogen-Chalcogen Ring Systems: From Radicals to Functional Materials Six-Membered and Larger Carbon-Nitrogen-Chalcogen Ring Systems Heterocyclo[thia- and Seleno-Azenes] Chalcogen-Nitrogen Chains and Polymers Weak Intramolecular Chalcogen-Nitrogen Interactions Readership: Scientists interested in the chemistry of sulfur, selenium or tellurium compounds, and upper level undergraduates in inorganic (main group) chemistry courses. Keywords: Sulfur; Selenium; Tellurium; Nitrogen; Heterocycles; Electron-Rich Compounds; Chemical Bonding; Metal Complexes Key Features: Focuses on important developments in the last 25 years Compares Sulfur, Selenium and Tellurium Compounds Targets the non-specialist as well as experts in the field Supplements standard textbook treatments of this subject Discusses theoretical concepts and practical applications Reviews: "Although each chapter is designed to be self-contained, there is detailed cross-referencing between them ... the focused nature of the chapters together with an adequate subject index makes finding particular compounds relatively easy ... the introductory chapters will be of significant interest to upper level undergraduates as well as to graduate students ... The comprehensive listing of reactions and reaction types found in the later chapters will be of more benefit to specialists in the arena of main group chemistry.

This modestly priced resource should be a welcome addition to researchers in the field or to those interested in entering the area." *Journal of the American Chemical Society* ' What Should Schools Teach?
