This self-guided introductory biology lab manual features a full range of activities that show how basic biological concepts can be applied to a wide variety of plants, animals, and microorganisms. It is designed to help readers (including those who are academically underprepared) acquire the basic knowledge needed to make informed decisions about biological questions that arise in everyday life, develop the problem-solving skills that will lead to success in a competitive job market, and learn to work effectively and productively as a member of a team. Focuses on the scientific method -- requiring readers to develop hypotheses, set up experiments, collect data, record their data in graphs and charts, and draw conclusions from their experimental results. Offers opportunities to transfer content knowledge to real life applications through questions interwoven into each activity. Each laboratory includes a brief discussion of background information, hints for solving problems, important safety information, Comprehension Checks and Self Tests (with answers). For anyone beginning a study of biology, including those who are academically underprepared or from an ESL background.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

One of these days, I'm going to sit down and write that novel.... Everyone thinks about doing it, yet most people who do start a novel end up stalling after a few chapters. Where do these would-be novelists go wrong? Are the characters dull and cliched? Did the story arc collapse? Did they succumb to a dreaded bout of "writer's block"? Or maybe it was all just taking too long? These problems used to stop writers in their tracks, but nothing will get in your way after reading Write Your Novel in a Month. Author and instructor Jeff Gerke has created the perfect tool to show you how to prepare yourself to write your first draft in as little as 30 days. With Jeff's help, you will learn how to organize your ideas, create dynamic stories, develop believable characters, and flesh out the idea narrative for your novel--and not just for the rapid-fire first draft. Jeff walks you through the entire process, from initial idea to the important revision stage, and even explains what to do with your novel once you've finished. Whether you are participating in National Novel Writing Month or you're simply hoping to complete a draft over winter break or your vacation, this book covers the entire scope of writing a novel and lays out exactly what you need to know to get it done fast and right.
