More than any other psychology textbook, Don
and Sandra Hockenbury 's Psychology relates
the science of psychology to the lives of the
wide range of students taking the introductory
course. Now Psychology returns in a
remarkable new edition that shows just how
well-attuned the Hockenburys are to the needs
of today 's students and instructors.

Psychology began with a basic idea: combine
scientific authority with a narrative that
engages students and relates to their lives. From
decades of experience teaching, the
Hockenburys created a book filled with cutting-
edge science and real-life stories that draw

students of all kinds into the course.

This volume offers original essays
exploring what ' fictive narrative
philosophy ' might mean in the research
and teaching of philosophy. The first part
of the book presents theoretical essays
that examine Boylan 's recent books:
Teaching Ethics with Three Philosophical
Novels and Fictive Narrative Philosophy:
How Literature can Act as Philosophy.
The second and third part offer essays on
how Boylan executes his theory in the
practice within his novels from his two
series De Anima and Arch . The book
clearly shows the unique aspects of the
fictive narrative philosophy approach.
First, it makes story-telling accessible to
wide audiences. Second, story-telling
techniques invoke devices that can set out
complicated existential problems to the
reader that offer an additional approach to
thorny problems through the presentation

of lived experience. Third, the discussion of these devices is a way to explore philosophical problems in a way that many can profit from. The book concludes with an essay in which Boylan responds to the critical challenges set out in Part One and the practical criticism set out in Parts Two and Three. Boylan addresses the key claims made by his objectors and defends his position. He engages with the authors in the way his theory is matched against his actual novels. This is useful reading for both philosophers and professors of literature teaching introductory as well as upper-level courses in the fields of philosophy, literature and criticism. This self-guided introductory biology lab manual features a full range of activities that show how basic biological concepts can be applied to a wide variety of plants, animals, and microorganisms. It is designed to help readers (including those who are academically underprepared) acquire the basic knowledge needed to make informed decisions about biological questions that arise in everyday life, develop the problem-solving skills that will lead to success in a competitive job market, and learn to work effectively and productively as a member of a team. Focuses on the scientific method -- requiring readers to develop hypotheses, set up experiments, collect data, record their data in graphs and charts, and draw conclusions from their experimental results. Offers opportunities to transfer content knowledge to real life applications through questions interwoven into each activity. Each laboratory includes a brief discussion of background information, hints for solving problems, important safety information, Comprehension Checks and Self Tests (with answers). For anyone beginning a study of biology, including those who are academically underprepared or from an ESL background.

Thoroughly updated in this second edition, Introduction to Gender offers an interdisciplinary approach to the main themes and debates in gender studies. This comprehensive and contemporary text explores the idea of gender from the perspectives of history, sociology, social policy, anthropology, psychology, politics, pedagogy and geography and considers issues such as health and illness, work, family, crime and violence, and culture and media. Throughout the text, studies on masculinity are highlighted alongside essential feminist work, producing an integrated investigation of the field. Key features: A thematic structure provides a clear exploration of each debate without losing sight of the interconnections between disciplines. World in focus boxes and international case studies offer a broad global perspective on gender

studies. In-text features and student exercises, including Controversy, A critical look and Stop and think boxes, allow the reader to engage in the debates and revise the material covered. Hotlinks throughout the text make connections between chapters, allowing the reader to follow the path of particular issues and debates between topics and disciplines. New to the second edition: A new chapter explores gender through the discipline of philosophy. A new section on international relations brings this relevant topic into focus. Current discussion on the language of gender across Europe is brought in to Chapter 1. A focus on Europe and Scandinavia as well as the UK gives the text a broader scope. Examples are updated throughout to ensure the text is cutting-edge and relevant. Introduction to Gender, second edition is highly relevant to today 's students across the social sciences and is an essential introduction for students of sociology, women ' s studies and men ' s studies.

Written by an award-winning historian of science and technology, Planet in Peril describes the top four mega-

dangers facing humankind – climate change, nukes, pandemics, and artificial intelligence. It outlines the solutions that have been tried, and analyzes why they have thus far fallen short. These four existential dangers present a special kind of challenge that urgently requires planet-level responses, yet today's international institutions have so far failed to meet this need. The book lays out a realistic pathway for gradually modifying the United Nations over the coming century so that it can become more effective at coordinating global solutions to humanity's problems. Neither optimistic nor pessimistic, but pragmatic and constructive, the book explores how to move past ideological polarization and global political fragmentation. Unafraid to take intellectual risks, *Planet in Peril* sketches a plausible roadmap toward a safer, more democratic future for us all.

In 1981, Plenum Press published a text entitled *The Nature and Treatment of the Stress Response* by Robert Rosenfeld, M. D. , and me. That text attempted to do what no other text from a major publisher had previously attempted, that is, to create a clinically practical guide for the treatment of excessive stress and its arousal-related syndromes-this to be captured between the same covers in combination with a detailed, clinically relevant pedagogy on the neurological and endocrinological foundations of the stress response itself. That volume has enjoyed considerable success having found markets among practicing

professionals and clinical students as well. The fields of psychosomatic medicine, health psychology, behavioral medicine, and applied stress research have appreciably expanded their boundaries since the publication of the aforementioned volume. Although remarkably little of the clinical utility of that volume has been eroded with time, it was felt that an updated and more integrative clinical textbook needed to be offered to practicing clinicians and students within clinical rather than simply create a second edition of training programs. Therefore, was made to create a significantly revised the original volume, the decision and expanded volume that would cover many of the same topics as the original volume but would provide a primary emphasis on the treatment of excessive stress and that would employ an integrative phenomenological model to facilitate that end. This present volume entitled *A Clinical Guide to the Treatment of the Human Stress Response* is the result.

"The Prentice Hall Choices in Literature is a balanced, integrated approach to language arts. Using literature as a base, the program develops students' capacities to read, write, speak, and listen, and helps them to connect literature to other content areas. At the same time, it fosters habits of critical thinking, aesthetic appreciation, and

cooperative interaction."--Page T13

 The 18th CIRP International
 Conference on Life Cycle Engineering
 (LCE) 2011 continues a long tradition
 of scientific meetings focusing on the
 exchange of industrial and academic
 knowledge and experiences in life
 cycle assessment, product
 development, sustainable
 manufacturing and end-of-life-
 management. The theme "Glocalized
 Solutions for Sustainability in
 Manufacturing" addresses the need for
 engineers to develop solutions which
 have the potential to address global
 challenges by providing products,
 services and processes taking into
 account local capabilities and
 constraints to achieve an economically,
 socially and environmentally
 sustainable society in a global
 perspective. Glocalized Solutions for
 Sustainability in Manufacturing do not
 only involve products or services that
 are changed for a local market by
 simple substitution or the omitting of
 functions. Products and services need
 to be addressed that ensure a high
 standard of living everywhere.
 Resources required for manufacturing
 and use of such products are limited
 and not evenly distributed in the
 world. Locally available resources,
 local capabilities as well as local
 constraints have to be drivers for
 product- and process innovations with
 respect to the entire life cycle. The
 18th CIRP International Conference on
 Life Cycle Engineering (LCE) 2011
 serves as a platform for the discussion
 of the resulting challenges and the
 collaborative development of new
 scientific ideas.

Concepts of Biology JHU Press
 Concepts of Biology is designed for
 the single-semester introduction to
 biology course for non-science
 majors, which for many students is
 their only college-level science
 course. As such, this course
 represents an important opportunity
 for students to develop the
 necessary knowledge, tools, and
 skills to make informed decisions as
 they continue with their lives.
 Rather than being mired down with
 facts and vocabulary, the typical
 non-science major student needs
 information presented in a way that
 is easy to read and understand.
 Even more importantly, the content
 should be meaningful. Students do
 much better when they understand
 why biology is relevant to their
 everyday lives. For these reasons,
 Concepts of Biology is grounded on
 an evolutionary basis and includes
 exciting features that highlight
 careers in the biological sciences
 and everyday applications of the
 concepts at hand. We also strive to
 show the interconnectedness of
 topics within this extremely broad
 discipline. In order to meet the
 needs of today's instructors and
 students, we maintain the overall
 organization and coverage found in
 most syllabi for this course. A
 strength of Concepts of Biology is
 that instructors can customize the
 book, adapting it to the approach
 that works best in their classroom.
 Concepts of Biology also includes
 an innovative art program that
 incorporates critical thinking and

clicker questions to help students understand--and apply--key concepts.

Biology students need to be able to analyse data and produce high quality practical reports. These skills are essential for success in assessments, examinations and project work. Asking Questions in Biology will help you to master the practical and data handling elements of your course, while teaching you a fundamental skill in scientific discovery. Tried and tested with students, this unique text explains:

- v Why asking the right questions is essential in any scientific enquiry
- v How to design experiments and project work
- v How to approach analysing data, using principles that apply with any statistical package
- v How to present your results including figures and tables

Features include:

- v Self-test questions and answers
- v An easy-to-use Quick Test Finder
- v Key topics are illustrated with a wide range of examples from ecology and behaviour to toxicology and parasitology.

This second edition continues to provide an invaluable text for practical courses in biology. It is especially useful for courses that emphasise hypothesis testing and data analysis, and as a guide for students working on assessed projects. Chris Barnard is Professor of Animal Behaviour and Francis Gilbert is Senior Lecturer in Ecology both at the University of

Nottingham. Peter McGregor is Head of the Department of Animal Behaviour in the Zoological Institute at the University of Copenhagen.
