fall of Lucifer and the origin of evil When does life begin (and why does it matter)? Is evolution a religion (and why should I care)? Archaeology, Egyptian Chronology, and the great flood Could early biblical figures like Noah really live to over 900 years of age? What was the Star of Bethlehem (and how did the wise men follow it)? The “Evolutionization” of our culture — including intelligent design, gay marriage, Hollywood movies, and more! Explore these and other topics, answered biblically and logically in this book from the world’s largest apologetics ministry, Answers in Genesis. Contributors include Ken Ham, Dr. Andrew Snelling, Dr. Jason Lisle, Dr. Elizabeth Mitchell, Dr. Danny Faulkner, Mike Riddle, and more.

*Concepts of Biology* is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As

such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, *Concepts of Biology* is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of *Concepts of Biology* is that instructors can customize

the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Authoritative, thorough, and engaging, Life: The Science

of Biology achieves an

optimal balance of scholarship and teachability, never losing sight of either the science or the student.

The first introductory text to present biological concepts

through the research that

revealed them, Life covers the full range of topics with

an integrated experimental focus that flows naturally

from the narrative. This

approach helps to bring the drama of classic and cutting-

edge research to the

classroom - but always in

the context of reinforcing core ideas and the innovative scientific thinking behind

them. Students will experience biology not just

as a litany of facts or a highlight reel of

experiments, but as a rich, coherent discipline.
