The second edition of a comprehensive state-of-the-art graduate level text on microeconomic methods, substantially revised and updated. The second edition of this acclaimed graduate text provides a unified treatment of two methods used in contemporary econometric research, cross section and data panel methods. By focusing on assumptions that can be given behavioral content, the book maintains an appropriate level of rigor while emphasizing intuitive thinking. The analysis covers both linear and nonlinear models, including models with dynamics and/or individual heterogeneity. In addition to general estimation frameworks (particular methods of moments and maximum likelihood), specific linear and nonlinear methods are covered in detail, including probit and logit models and their multivariate, Tobit models, models for count data, censored and missing data schemes, causal (or treatment) effects, and duration analysis. Econometric Analysis of Cross Section and Panel Data was the first graduate econometrics text to focus on

microeconomic data structures, allowing assumptions to be separated into population and sampling assumptions. This second edition has been substantially updated and revised. Improvements include a broader class of models for missing data problems; more detailed treatment of cluster problems, an important topic for empirical researchers; expanded discussion of "generalized instrumental variables" (GIV) estimation; new coverage (based on the author's own recent research) of inverse probability weighting; a more complete framework for estimating treatment effects with panel data, and a firmly established link between econometric approaches to nonlinear panel data and the "generalized estimating equation" literature popular in statistics and other fields. New attention is given to explaining when particular econometric methods can be applied; the goal is not only to tell readers what does work, but why certain "obvious" procedures do not. The numerous included exercises, both theoretical and computer-based, allow the reader to extend methods covered in the text and discover new insights.

Researchers in applied linguistics have found medical and health contexts to be fertile grounds for study, from macro-levels of conceptual analyses to micro-levels of the "turn-by-turn." The rich array of health contexts include medical research itself, clinical encounters, medical education and training, caregivers and patients in everyday life – from the formal and ritualized to the ad hoc and ephemeral. This volume foregrounds the crucial role of applied linguists addressing real world problems, while simultaneously highlighting the varied ways that health can be understood as a rich site of language inquiry in its own right. Chapters cover a range of health topics including medical training, medical interaction, disability in education, health policy analysis and recommendations, multidisciplinary research teams, and medical ethics. While reporting and reflecting on their specific topics in clinical and health contexts, contributors also articulate their own hybrid identities as professional collaborators in health research, education, and policy.
