The "Inspection Authorization Test Prep" provides Aviation Maintenance Technicians (AMTs) with all the information needed to pass the FAA's Knowledge Exam for Inspection Authorization, and helps candidates become familiar with the privileges and limitations of the highest level of maintenance certification. This book is an important reference source for all AMTs seeking to add Inspection Authorization (IA) to his or her qualifications, as well as AMT schools preparing students for the IA test. All IA candidates must take and pass the FAA's exam, yet it remains a "closed test" in that the exact

database of questions is not available to the public, which makes the IA Test Prep a great way to prepare for it. The IA exam differs from other FAA exams in that questions do not refer to a specific figure. Instead, applicants must learn to glean the information they need from the FAA Supplement (CT-8080-8) made available for use during the test. The over 500 sample questions typify those that candidates are likely to encounter, and train readers in the use of the available documents. Answer choices are supported with explanations, with FAA references identified for further study. Also provides details on what applicants need to know about the certification process, insight into the function of an IA, and excerpts of regulations, advisory circulars, airworthiness directives, type certificate data sheets, FAA orders and aircraft specifications. Resources such as pertinent excerpts from these FAA documents and more are reprinted in this study guide; additionally, readers can access additional study material for this book at a special "Reader Resources" page at the ASA website. The IA Test Prep conveniently compiles the reference materials necessary to prepare for this exam into one volume, for an organized study program that AMT schools, instructors, and individuals alike can use to streamline their studies. Cracking the OAT (Optometry Admission Test) ACS Symposium

This symposium series volume was developed in order to share papers presented at the 245th ACS National Meeting on the topic of pilot plants. The Industrial and Chemical Engineering, Applied Chemical Technology Subdivision hosted a one-day symposium for industry and academic researchers to present and share their work and best practices on operations and safety in pilot plant environments. Designing and building "pilot plants" can be a big challenge, and this volume outlines the proper operations needed to run a plant safely, in both academic and industrial environments. The book addresses issues like chemical separation, chemical reactions, waste generation, process controls, and spatial considerations, as well as safety precautions. It describes ways in which plant designers and contractors can consider ease of operation, maintenance, pinch-points, and sampling, among other aspects. In contrast to workers in large-scale facilities, pilot plant workers in both industry and academia are not only exposed to hazardous substances, they are exposed to such materials in a smaller setting and thus to potentially greater concentrations. This book brings together workers and researchers in pilot plant environments to

present and share their best practices as regards operations and safety.
