Mathematics in schools offering the Integrated Programme is usually taught as an integrated subject, so that students will be able to better relate learnt knowledge to new knowledge and transfer conceptual understanding to application, as many mathematical concepts are interconnected. One driving force to write the series is to provide a guidebook especially for students in the Integrated Programme. The other is to share teaching ideas with other Mathematics teachers who love the subject as much as I do. Features: Each topic begins with a recap of key mathematical concepts to help students consolidate learning. Worked examples are included to enhance understanding and application of key concepts, with side notes explaining some of the working. Practice questions are tiered into three levels of difficulty. Level 1 aims to provide students with the necessary practice; Level 2 to further build the confidence and test students understanding; Level 3 to challenge students with higher order thinking questions.

Math Wonderland is one highlight of the book. Activities include extension of the topic, suggested alternative assessment and questions to stretch mathematical thinking. The primary purpose of the Wonderland is to allow students to think deeply about what they have learnt and to appreciate the learning of Mathematics beyond classroom. Step-by-step solutions to all questions are provided as an additional resource to students problem solving process. I hope this book will benefit students studying Integrated Mathematics, as well as those with aptitude for the subject who are preparing for the GCE O Level Mathematics and Additional Mathematics examinations.

The Fourth International Congress on Mathematics Education was held in Berkeley, California, USA, August 10-16, 1980. Previous Congresses were held in Lyons in 1969, Exeter in 1972, and Karlsruhe in 1976. Attendance at Berkeley was about 1800 full and 500 associate members from about 90 countries; at least half of these come from outside of North America. About 450 persons

participated in the program either as speakers or as presiders; approximately 40 percent of these came from the U.S. or Canada. There were four plenary addresses; they were delivered by Hans Freudenthal on major problems of mathematics education, Hermina Sinclair on the relationship between the learning of language and of mathematics, Seymour Papert on the computer as carrier of mathematical culture, and Hua Loo-Keng on popularising and applying mathematical methods. George Polya was the honorary president of the Congress; illness prevented his planned attendance but he sent a brief presentation entitled, "Mathematics Improves the Mind". There was a full program of speakers, panelists, debates, miniconferences, and meetings of working and study groups. In addition, 18 major projects from around the world were invited to make presentations, and various groups representing special

This book is designed to help students in grade 3 master the Mathematics section of the Primary 4 Independent School Entrance Exam (ISEE).

Over the years, the team at Manhattan Tutors has found that students are understandably overwhelmed by the enormous amount of information contained in most test prep books. The math sections tend to be particularly intimidating for students who are preparing for the test. The Manhattan Tutors Guide to the Primary 4 ISEE: Mathematics was written with students in mind. Our streamlined guide is designed to provide students with a

tailored study plan that they can use to focus their preparation and minimize the amount of time they need to get ready for the ISEE. This book contains an introduction to the math fundamentals necessary to succeed on the test and explanations of specific practice questions that are found on the Primary 4 ISEE, as well as two practice tests. Here's your step-by-step guide for using this book: 1. With your student, read through the ISEE Math Strategies in Part II and complete the practice problems. 2. Have your student take the first practice test in Part V. Review the questions he or she answered incorrectly, and focus your remaining time on studying those question types and math fundamentals. 3. Six weeks before the real test, take the second practice test in Part

---

V. Compare your student's results with those from the first practice test, and identify areas of improvement and areas he or she still needs to work on. 4. Four weeks before the real test, take the diagnostic test provided by the ERB. This test, What to Expect on the Primary 4 ISEE, can be found at [ERBLearn.org](http://ERBLearn.org). 5.

Remember: the ISEE is just one component of a comprehensive application. Schools consider a student's grades, extracurriculars, teacher recommendations, and personal essays, so try not to stress too much over the test! Warmest regards, The Staff of Manhattan Tutors
