This landmark study is the first to examine analytically the nature of the opportunities that entrepreneurs pursue, the problems they face, the traits they require, and the

social and economic contributions they make. Until recently, entrepreneurs have been largely ignored in modern economic theory. But at the dawn of a networked age, marked by the advent of e-business and the home office, there's no question that entrepreneurs have recaptured the popular imagination. Studies now show that most men and women dream of starting their own businesses rather than rising through the corporate ranks. Yet in spite of increased attention by many of today's leading business schools, entrepreneurship has remained largely a mystery, an apparently intuitive sense of values possessed by certain individuals.; This book targets the issues central to successful start-up ventures, such as endowments and opportunities, planning versus adaptation, securing resources, corporate initiatives, venture capital, revolutionary ventures and the evolution of fledgling businesses. Focusing on hard data and evaluations of numerous start-up businesses, including many of today's major industry leaders, this book presents a new economic model-a key to understanding the guts, determination, luck and skills that constitute the underpinnings of corporate success. Written in clear, concise prose, The Origin and Evolution of New Businesses goes behind the charts and graphs of business theory to the true heart of success. It is essential reading for business students, would-be entrepreneurs, or executives wanting to incorporate the vitality of the entrepreneurial spirit into their organization.

For advanced undergraduate/graduate-level courses in Automation, Production Systems, and Comp uter-Integrated Manufacturing. This exploration of the technical and engineering aspects

of automated production systems provides the most advanced, comprehensive, and balanced coverage of the subject of any text on the market. It covers all the major cutting-edge technologies of production automation and material handling, and how these technologies are used to construct modern manufacturing systems. *Resources in Education* Oxford University Press In early 2002, an analyst, Tom Baumann, must propose terms for leasing one of his company's advanced factory-automation systems to a major customer. From the lessor's standpoint, the challenge is simply to design an annuity stream that yields a present value equal to, or greater than, the value of the asset being leased. Certain factors, however, serve to complicate the analysis. The tax exposure and debt rating of the customer are uncertain, leaving the analyst to estimate the impact of alternative lease terms under different tax and interest-rate assumptions. Also, the customer is considering leasing competing systems from companies in Germany and Japan; these competing proposals limit Primus's flexibility in tailoring its proposal. In short, the student's task is to design lease terms that exploit the lessee's tax and interest-rate exposure within constraints set by competitive terms. The Handbook of Financing Growth John Wiley & Sons E-service is an increasingly popular business practice and a critical part of supporting the global

information society. The Digital Service Platforms book reduces the ambiguity about e-service by clarifying how to take advantage of it as well as how to overcome barriers and issues. It includes ten chapters in three subject areas: e-service and social media, e-service concepts, and e-service quality and development. Chapters cover such topics as organization-community relationships, systematic e-service innovation, social media ecosystems, accessibility experience design, Industry 4.0, public e-employment services in different countries, and more.

Diverse cellular processes depend on weak interactions between biological components. In this volume, we bring together a wealth of recent information on this topic, combining original research articles with up-to-date reviews, organized under four separate themes. In our first section on nucleic acid regulation, we include a study of the PII-NAGK-PipX-NtcA regulatory axis of cyanobacteria and discover much about the role of RNA binding protein regulation and cross-talk in the control of AU-rich mRNA. Peptide-mediated weak

interactions are our second theme in which we review weak molecular interactions in clathrin-mediated endocytosis, investigate the selectivity of the G7-18NATE inhibitor peptide for the Grb7-SH2 domain target and present new structure and interactions of the TPR domain of Sgt2 with yeast chaperones and Ybr137wp. Our third part focuses on carbohydrates and includes a thorough review of how to use NMR to study transient carbohydrate-protein binding and a structural and functional study of

lysostaphin - substrate interaction. In our final section, we look at functional sensors driving weak interactions by presenting the molecular basis of the dual regulation of bacterial iron sulfur cluster biogenesis by CyaY and IscX alongside a review of intramolecular fuzzy interactions involving intrinsically disordered domains. Taken together, our eBook chapters offer some recent insight into this area of scientific understanding which is still expanding exponentially.

As explored in this open access book, higher education in STEM fields is influenced by many factors, including education research, government and school policies, financial considerations, technology limitations, and acceptance of innovations by faculty and students. In 2018, Drs. Ryoo and Winkelmann explored the opportunities, challenges, and future research initiatives of

innovative learning environments (ILEs) in higher education STEM disciplines in their pioneering project: eXploring the Future of Innovative Learning Environments (X-FILEs). Workshop participants evaluated four main ILE categories: personalized and adaptive learning, multimodal learning formats, cross/extended reality (XR), and artificial intelligence (AI) and machine learning (ML). This open access book gathers the

perspectives expressed during the X-FILEs workshop and its follow-up activities. It is designed to help inform education policy makers, researchers, developers, and practitioners about the adoption and implementation of ILEs in higher education.
