InfoWorld Metaautomation While tools for analyzing streaming and real-time data are gaining adoption, the ability to visualize these data types has yet to catch up. Dashboards are good at

conveying daily or weekly data trends at a glance, though capturing snapshots when data is transforming from moment to moment is more difficult—but not impossible. With this practical guide, application designers, data scientists, and system administrators will explore ways to create visualizations that bring context and a sense of time to streaming text data. Author Anthony Aragues guides you through the concepts and tools you need to build visualizations for analyzing data as it

Network World Primus Automation Division, 2002 In early 2002, an analyst, Tom Baumann, must propose terms for leasing one of his company's advanced factory-automation systems to a major customer. From the lessor's standpoint, the challenge is simply to design an annuity stream that yields a present value equal to, or greater than, the value of the asset being leased. Certain factors, however, serve to complicate the analysis. The tax exposure and debt rating of the customer are uncertain, leaving the analyst to estimate the impact of alternative lease terms under different tax and interest-rate assumptions. Also, the customer is considering leasing competing systems from companies in Germany and Japan; these competing proposals limit Primus's flexibility in tailoring its proposal. In short, the student's task is to design lease terms that exploit the lessee's tax and interest-rate exposure within constraints set by competitive terms. school policies, financial considerations, technology limitations, and acceptance of innovations by faculty and students. In 2018, Drs. Ryoo and Winkelmann explored the opportunities, challenges, and future research initiatives of innovative learning environments (ILEs) in higher education STEM disciplines in their pioneering project: eXploring the Future of Innovative Learning Environments (X-FILES). Workshop participants evaluated four main ILE categories: personalized and adaptive learning, multimodal learning formats, cross/extended reality (XR), and artificial intelligence (AI) and machine learning (ML). This open access book gathers the perspectives expressed during the X-FILES workshop and its follow-up activities. It is designed to help inform education policy makers, researchers, developers, and practitioners about the adoption and implementation of ILEs in higher education. Diverse cellular processes depend on weak interactions between biological components. In this volume, we bring together a wealth of recent information on this topic, combining original research articles with up-to-date reviews, organized under four separate themes. In our first section on nucleic acid regulation, we include a study of the PII-NAGK-PipX-NtcA regulatory axis of cyanobacteria and discover much about the role of RNA binding protein regulation and cross-talk in the control of AU-rich mRNA. Peptide-mediated weak interactions are our second theme in which we review weak molecular interactions in clathrin-mediated endocytosis, investigate the selectivity of the G7-18NATE inhibitor peptide for the

Grb7-SH2 domain target and present new structure and interactions of the TPR domain of Sgt2 with yeast chaperones and Ybr137wp. Our third part focuses on carbohydrates and includes a thorough review of how to use NMR to study transient carbohydrate - protein binding and a structural and functional study of lysostaphin - substrate interaction. In our final section, we look at functional sensors driving weak interactions by presenting the molecular basis of the dual regulation of bacterial iron sulfur cluster biogenesis by CyaY and IscX alongside a review of intramolecular fuzzy interactions involving intrinsically disordered domains. Taken together, our eBook chapters offer some recent insight into this area of scientific understanding which is still expanding exponentially.

Few would deny the crucial role that entrepreneurs play in our increasingly global economy-but exactly what is this vital, yet loosely defined business force we call the entrepreneurial spirit? This landmark study is the first to examine analytically the nature of the opportunities that entrepreneurs pursue, the problems they face, the traits they require, and the social and economic contributions they make. Until recently, entrepreneurs have been largely ignored in modern economic theory. But at the dawn of a networked age, marked by the advent of e-business and the home office, there's no question that entrepreneurs have recaptured the popular imagination. Studies now show that most men and women dream of starting their own businesses rather than rising through the corporate ranks. Yet in spite of increased attention by many of today's leading business schools, entrepreneurship has remained largely a mystery, an apparently intuitive sense of values possessed by certain individuals.; This book targets the issues central to

successful start-up ventures, such as endowments and opportunities, planning versus adaptation, securing resources, corporate initiatives, venture capital, revolutionary ventures and the evolution of fledgling businesses. Focusing on hard data and evaluations of numerous start-up businesses, including many of today's major industry leaders, this book presents a new economic model-a key to understanding the guts, determination, luck and skills that constitute the underpinnings of corporate success. Written in clear, concise prose, *The Origin and Evolution of New Businesses* goes behind the charts and graphs of business theory to the true heart of success. It is essential reading for business students, would-be entrepreneurs, or executives wanting to incorporate the vitality of the entrepreneurial spirit into their organization.
