This book investigates the going-concern principle in the non-financial disclosure by companies in the international scenario proposing concepts and challenges to come. Following the main accounting literature, requirements and regulations, this book proposes the current state of the art in the non-financial disclosure, collecting main mandatory and voluntary frameworks and standards (e.g. European Directive 2014/95/UE on non-financial information, Global Reporting Initiative, International Integrated Reporting Council, Sustainability Accounting Standards Board, Climate Disclosure Standard Board, Carbon Disclosure Project, AA1000). This is a useful proposition for the investigation of the presence versus absence of the going concern in the sustainability and non-financial reports and disclosure by companies. Through a qualitative methodology, this book is intended to show the incidence of the going-concern in the non-financial disclosure and to what content and meaning it is referred. Several issues and characteristics of information provided to stakeholders are drafted.

This book provides an original account detailing the origins and components of a faith-based accounting system that was founded around 629 CE. By examining the historical development that the accounting systems underwent within the context of faith-based rules and values, the book explains what is meant by the term "faith-based accounting", together with a discussion of its characteristics in relation to various product structures and the underlying Islamic finance principles. It provides important theoretical and practical contributions by explaining accounting as a value-based science rather than a value-free object or abstract. This book explores the way in which religious rules act as a directive for accounting and auditing practices in IFIs. Through which the concept of money and digital currency within the theory of money and how it is enacted in a faith-based context, amid differences of opinions among its actors, is examined. This is an important foundation to explain Islamic accounting and includes how this outcome would shape the faith-based view regarding the new phenomenon of digital currency (DC). Also featured is the concept of paper money within the theory of money and how it is enacted in a faith-based legal framework by identifying two core concepts of today's Fiat money as being a single genus or multi-genera money. This book is not merely an academic work, nor is it a pure practitioner guide; rather, it is a robust work that combines both. It marries rigorous academic research and theories with practical industry experiences. The book provides a clear and concise guide to accounting in Islamic economics and finance and how Islamic financial institutions could meet the applicable faith-based rules in their accounting practices.
